

Question ID	Module ID	Type	Difficulty 1-5	Original ECOD Question	Follow-up Probes	Expected Evidence (ECOD-designed)	Red Flags	Gap Tag	Enrichment Prescription	Suggested Minutes	Status	Version	Question Family	Difficulty Band	Assessment Mode	Randomization Eligible
RSA-F01-001	F01	Customer Simulation	4	A customer says, "Our testing data platform works. Why should we introduce another platform and migration risk? Respond as the technical lead before proposing a solution."	What would you clarify with the stakeholder first? How would you explain the Customer Solutioning recommendation and trade-offs? What evidence or next step would build confidence?	Clear stakeholder-aware reasoning on Customer Solutioning, with discovery, explicit trade-offs, credible evidence and a practical next step.	Feature-dumps, uses unexplained jargon, skips discovery, hides trade-offs or cannot define evidence and next steps for Customer Solutioning.	Customer Solutioning — F01	Complete Databricks Values & RSA Role and a targeted customer simulation exercise focused on Customer Solutioning.	5	Active	1.2	Customer Solutioning	Intermediate	Live assessor	Yes
RSA-F01-002		Common Question	4	In simple terms, what problem does Databricks solve for an enterprise, and what is the role of an RSA in helping the client solve that problem?	What would you clarify with the stakeholder first? How would you explain the Consulting & Client Skills recommendation and trade-offs? What evidence or next step would build confidence?	Clear stakeholder-aware reasoning on Consulting & Client Skills, with discovery, explicit trade-offs, credible evidence and a practical next step.	Feature-dumps, uses unexplained jargon, skips discovery, hides trade-offs or cannot define evidence and next steps for Consulting & Client Skills.	Consulting & Client Skills — F01	Complete Databricks Values & RSA Role and a targeted common question exercise focused on Consulting & Client Skills.	4	Active	1.2	Consulting & Client Skills	Intermediate	Either	Yes
RSA-F01-003		Customer Simulation	4	A client says, "We already have a data warehouse and Spark environment. Why do we need Databricks? How would you answer?"	What would you clarify with the stakeholder first? How would you explain the Consulting & Client Skills recommendation and trade-offs? What evidence or next step would build confidence?	Clear stakeholder-aware reasoning on Consulting & Client Skills, with discovery, explicit trade-offs, credible evidence and a practical next step.	Feature-dumps, uses unexplained jargon, skips discovery, hides trade-offs or cannot define evidence and next steps for Consulting & Client Skills.	Consulting & Client Skills — F01	Complete Databricks Values & RSA Role and a targeted customer simulation exercise focused on Consulting & Client Skills.	5	Active	1.2	Consulting & Client Skills	Intermediate	Live assessor	Yes
RSA-F01-004	F01	Objective Question	5	A global manufacturer must make a high-impact decision about Fragmented data estates while platform capabilities and value create a compelling constraint. Which response is most defensible? A) Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the outcome. B) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. C) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. D) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment.	Correct answer: A; requires advanced judgment about Fragmented data estates, platform capabilities and value, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Fragmented data estates advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Advanced	Online assessment	Yes
RSA-F01-005		Objective Question	4	During Ambiguous enterprise modernization cases with CIO, architect, security, platform and engineering perspectives, an early demonstration of Lakehouse change succeeds, but only under ideal conditions. What evidence is required before scaling? A) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. B) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. C) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. D) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment.	Correct answer: A; requires advanced judgment about Lakehouse change, use cases, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Lakehouse change advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F01-006		Objective Question	4	Two technically credible designs use enterprise architecture position differently. One optimizes short-term delivery, the other improves stakeholders but adds complexity. How should the RSA decide? A) Combine the strongest elements of both designs and accept temporary duplication until operating evidence clarifies the design. B) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. C) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. D) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment.	Correct answer: D; requires advanced judgment about enterprise architecture position, stakeholders, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	enterprise architecture position advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F01-007	F01	Objective Question	5	A production issue is attributed to platform capabilities and value, although telemetry also changed for RSA lifecycle. Which investigation sequence is strongest? A) Increase capacity, compare before and after metrics, and treat improved performance as evidence that resource increases caused the incident. B) Treat the incident as a security priority, isolate the causal condition, and test the smallest corrective change first. C) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. D) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment.	Correct answer: D; requires advanced judgment about platform capabilities and value, RSA lifecycle, evidence and decision consequences.	Form computing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	platform capabilities and value advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Advanced	Online assessment	Yes
RSA-F01-008		Objective Question	4	The steering committee asks whether use cases it needs to support Two-minute recorded answer to the common assessment question plus second advanced and stakeholder explanation. Which priorities the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. B) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: C; requires advanced judgment about use cases, role boundaries, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	use cases advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F01-009		Objective Question	4	A security priority is CIO vs engineer messaging, engineering priorities stakeholders, and engineers raise concerns about enterprise architecture position. What should happen next? A) Narrow the first release to undisputed requirements and defer conflicting capabilities to a separate validation sprint with named stakeholders. B) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: D; requires advanced judgment about stakeholders, CIO vs engineer messaging, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare computational and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	stakeholders advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F01-010	F01	Objective Question	5	A new requirement invalidates an assumption behind RSA lifecycle midway through delivery. Which action demonstrates senior judgment? A) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. B) Quantify the impact on outcomes, which design deliverables must effectively expose a hidden weakness in an approach centered on role boundaries? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which assumptions have the weakest support, and after a successful pilot, the global manufacturer must operationalize CIO vs engineer messaging. Which operational model is strongest? A) Automate deployment and monitoring, with the product team serving exceptions until service levels remain stable for an agreed period. B) Retain the pilot team through a defined assessment cycle. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: B; requires advanced judgment about RSA lifecycle, Fragmented data estates, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	RSA lifecycle advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Advanced	Online assessment	Yes
RSA-F01-011		Objective Question	4	Which design deliverables must effectively expose a hidden weakness in an approach centered on role boundaries? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which assumptions have the weakest support, and after a successful pilot, the global manufacturer must operationalize CIO vs engineer messaging. Which operational model is strongest? A) Automate deployment and monitoring, with the product team serving exceptions until service levels remain stable for an agreed period. B) Retain the pilot team through a defined assessment cycle. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: A; requires advanced judgment about role boundaries, Lakehouse change, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	role boundaries advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F01-012		Objective Question	4	After a successful pilot, the global manufacturer must operationalize CIO vs engineer messaging. Which operational model is strongest? A) Automate deployment and monitoring, with the product team serving exceptions until service levels remain stable for an agreed period. B) Retain the pilot team through a defined assessment cycle. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: C; requires advanced judgment about operational CIO vs engineer messaging, enterprise architecture position, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, outlooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	CIO vs engineer messaging advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F01-013	F01	Objective Question	5	An assessor challenges your recommendation because a crucial fact about Fragmented data estates remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery path on track. B) Acknowledge the uncertainty, explain the impact on decision impact, define the smallest credible test, and describe the alternative if the uncertainty fails. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: B; requires advanced judgment about Fragmented data estates, platform capabilities and value, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the uncertainty fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Fragmented data estates advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Advanced	Online assessment	Yes
RSA-F01-014		Objective Question	4	In a Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises, Lakehouse change, use cases and stakeholder pressure point toward different actions. What best reflects the RSA role? A) Own the model technical details. B) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: B; requires advanced judgment about Lakehouse change, use cases, evidence and decision consequences.	Keep the client outcome central, clarify role boundaries, acknowledge uncertainties, separate mandatory trade-offs, and secure evidence for the next decision.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Lakehouse change advanced decision — F01	Use Map a fragmented enterprise estate to a value-led target architecture, create stakeholder-specific explanations, complete role-boundary and trade-off exercises to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-T01-001	T01	Architecture Case	5	A Lakehouse must serve batch reporting, near-real-time operational dashboards and data science from the same core datasets. Explain the architecture and where you would deliberately separate workloads.	Which requirements and constraints drive the Architecture & Dynamic Design design? What alternatives and trade-offs did you consider? How would you validate the architecture before scaling it?	Accurate Architecture & Dynamic Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Architecture & Dynamic Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Architecture & Dynamic Design — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted architecture case exercise focused on Architecture & Dynamic Design.	6	Active	1.2	Architecture & Dynamic Design	Advanced	Live assessor	Yes
RSA-T01-002		Scenario	4	An organization has 12 business units and wants autonomy without losing central governance. Propose workspace, catalog and environment boundaries and explain the trade-offs.	What assumptions shape this Architecture & Dynamic Design scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Architecture & Dynamic Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Architecture & Dynamic Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Architecture & Dynamic Design — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted scenario exercise focused on Architecture & Dynamic Design.	4	Active	1.2	Architecture & Dynamic Design	Intermediate	Either	Yes
RSA-T01-003		Scenario	4	A pipeline design works at 10 TB but is projected to reach 300 TB. Identify which architectural assumptions you would revisit before scale becomes a problem.	What assumptions shape this Architecture & Dynamic Design scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Architecture & Dynamic Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Architecture & Dynamic Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Architecture & Dynamic Design — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted scenario exercise focused on Architecture & Dynamic Design.	4	Active	1.2	Architecture & Dynamic Design	Intermediate	Either	Yes
RSA-T01-004	T01	Concept	4	What is Lakehouse architecture, and why might an enterprise choose it instead of maintaining separate data lake and data warehouse environments?	Define Modern Databricks Architecture in practical terms. Give an enterprise example and explain the value. What limitations or trade-offs should be acknowledged?	Accurate Modern Databricks Architecture reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Modern Databricks Architecture answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Modern Databricks Architecture — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted concept exercise focused on Modern Databricks Architecture.	4	Active	1.2	Modern Databricks Architecture	Intermediate	Either	Yes
RSA-T01-005		Customer Simulation	4	A client already has a multi-data warehouse and a separate data lake. How would you assess whether moving toward a Lakehouse architecture actually makes sense for them?	What would you clarify with the stakeholder first? How would you explain the Modern Databricks Architecture recommendation and trade-offs? What evidence or next step would build confidence?	Clear stakeholder-aware reasoning on Modern Databricks Architecture, with discovery, explicit trade-offs, credible evidence and a practical next step.	Feature-dumps, uses unexplained jargon, skips discovery, hides trade-offs or cannot define evidence and next steps for Modern Databricks Architecture.	Modern Databricks Architecture — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted customer simulation exercise focused on Modern Databricks Architecture.	5	Active	1.2	Modern Databricks Architecture	Intermediate	Live assessor	Yes
RSA-T01-006		Deep Dive	4	Databricks increasingly describes itself as a Data Intelligence Platform rather than just a Lakehouse platform. What does that shift mean architecturally and from a client's perspective?	Explain the mechanism behind Data Intelligence & Platform Strategy. What future modes or limitations matter? How would you verify the behavior in practice?	Accurate Data Intelligence & Platform Strategy reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Data Intelligence & Platform Strategy answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Data Intelligence & Platform Strategy — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted deep dive exercise focused on Data Intelligence & Platform Strategy.	5	Active	1.2	Data Intelligence & Platform Strategy	Intermediate	Either	Yes
RSA-T01-007	T01	Architecture Case	5	A client wants GenAI, BI, data engineering and machine learning on the same platform. Explain the architectural advantages and possible risks of using Databricks as the common platform.	Which requirements and constraints drive the Data Intelligence & Platform Strategy design? What alternatives and trade-offs did you consider? How would you validate the architecture before scaling it?	Accurate Data Intelligence & Platform Strategy reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Data Intelligence & Platform Strategy answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Data Intelligence & Platform Strategy — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted architecture case exercise focused on Data Intelligence & Platform Strategy.	6	Active	1.2	Data Intelligence & Platform Strategy	Advanced	Live assessor	Yes
RSA-T01-008		Scenario	4	An enterprise uses bronze, silver and gold layers but has created hundreds of duplicated golden tables. How would you evolve the design toward governed data products without losing the benefits of the mediation pattern?	What assumptions shape this Modern Databricks Architecture scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Modern Databricks Architecture reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Modern Databricks Architecture answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Modern Databricks Architecture — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted scenario exercise focused on Modern Databricks Architecture.	4	Active	1.2	Modern Databricks Architecture	Intermediate	Either	Yes
RSA-T01-009		Concept	4	How would you explain the difference between a good Databricks implementation and a good Databricks architecture?	Define Consulting & Client Skills in practical terms. Give an enterprise example and explain the value. What limitations or trade-offs should be acknowledged?	Accurate Consulting & Client Skills reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Consulting & Client Skills answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Consulting & Client Skills — T01	Complete Databricks Architecture, Lakehouse & Data Intelligence and a targeted concept exercise focused on Consulting & Client Skills.	4	Active	1.2	Consulting & Client Skills	Intermediate	Either	Yes
RSA-T01-010	T01	Objective Question	4	A regulated bank must make a high-impact decision about Lakehouse while computer/storage separation creates a compelling constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. C) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. D) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment.	Correct answer: D; requires advanced judgment about Lakehouse, computer/storage separation, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Lakehouse advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T01-011		Objective Question	4	During Enterprise architecture case with conflicting data, analytics and AI requirements, an early demonstration of Medallion succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor production performance. B) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. C) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment. D) Run representative tests across scale, failure, recovery, and realistic use cases, measure agreed criteria and document limitations before approving broader deployment.	Correct answer: B; requires advanced judgment about Medallion, workload patterns, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Medallion advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T01-012		Objective Question	5	Two technically credible designs use Databricks platform architecture differently. One optimizes short-term delivery, the other improves reference architecture but adds complexity. How should the RSA decide? A) Choose the faster design if it is reversible, then schedule a formal checkpoint after early usage data becomes available. B) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities.	Correct answer: D; requires advanced judgment about Databricks architecture, reference architecture, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Databricks platform architecture advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes

RSA-T01-013	T01	Objective Question	4	A production issue is attributed to compute/storage separation, although latency also changed for Data Intelligence Platform. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Correct answer: A; requires advanced judgment about compute/storage separation, Data Intelligence Platform, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	compute/storage separation advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T01-014	T01	Objective Question	4	The steering committee asks whether workload patterns is ready to support. Define the reference architecture and key trade-offs for an unseen client. Which proof carries the most weight? A) Design an independent design review with requirement traceability, operational readiness checks, and clear ownership to unresolved risks.	Correct answer: B; requires advanced judgment about workload patterns, architecture trade-offs, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	workload patterns advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T01-015	T01	Objective Question	5	Security prioritizes Lakehouse, engineering prioritizes reference architecture, and operations raises concerns about compute/storage separation. What should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and preferred compromise in a new requirement invariants an assumption behind Data Intelligence Platform midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependency requires immediate redesign. B) Keep the original design review question most effectively exposes a hidden weakness in an approach centered on architecture trade-offs? A) Which integration points carry the greatest uncertainty, and how have comparable teams reduced similar implementation and operating risks? B) Could the design meet current requirements with After a successful pilot, the regulated bank must operationalize Lakehouse. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assume primary support responsibility. B) Transfer ownership at go-live using acceptance criteria, formal	Correct answer: C; requires advanced judgment about reference architecture, Lakehouse, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	reference architecture advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T01-016	T01	Objective Question	4	A new requirement invariants an assumption behind Data Intelligence Platform midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependency requires immediate redesign. B) Keep the original design review question most effectively exposes a hidden weakness in an approach centered on architecture trade-offs? A) Which integration points carry the greatest uncertainty, and how have comparable teams reduced similar implementation and operating risks? B) Could the design meet current requirements with After a successful pilot, the regulated bank must operationalize Lakehouse. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assume primary support responsibility. B) Transfer ownership at go-live using acceptance criteria, formal	Correct answer: C; requires advanced judgment about Data Intelligence Platform, Medallion, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Data Intelligence Platform advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T01-017	T01	Objective Question	4	Which design review question most effectively exposes a hidden weakness in an approach centered on architecture trade-offs? A) Which integration points carry the greatest uncertainty, and how have comparable teams reduced similar implementation and operating risks? B) Could the design meet current requirements with After a successful pilot, the regulated bank must operationalize Lakehouse. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assume primary support responsibility. B) Transfer ownership at go-live using acceptance criteria, formal	Correct answer: D; requires advanced judgment about architecture trade-offs, DataBricks platform architecture, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	architecture trade-offs advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T01-018	T01	Objective Question	5	After a successful pilot, the regulated bank must operationalize Lakehouse. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assume primary support responsibility. B) Transfer ownership at go-live using acceptance criteria, formal	Correct answer: C; requires advanced judgment about Lakehouse, compute/storage separation, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Lakehouse advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T01-019	T01	Objective Question	4	An assessor challenges your recommendation because a crucial fact about Medallion remains uncertain. Which answer is strongest? A) Pause the decision until the uncertainty is fully resolved, then return with one firm recommendation and no conditional alternatives. B) State the recommendation and its sensitivity to the	Correct answer: D; requires advanced judgment about Medallion, workload patterns, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Medallion advanced decision — T01	Use Map a current enterprise estate to a workload-led target architecture to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T02-001	T02	Scenario	4	Design an ingestion pipeline for continuously arriving cloud files where raw files must be disclosed efficiently and processed incrementally with recovery after failures.	What assumptions shape this Streaming & Ingestion scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted control exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T02-002	T02	Deep Dive	4	A source system sends inserts, updates and deletes. Design an ingestion pipeline that maintains a current analytical table and can recover after interruption.	Explain the mechanism behind Streaming & Ingestion. What failure modes or operating trade-offs matter? How would you verify the behavior in practice?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted drop the exercise focused on Streaming & Ingestion.	5	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T02-003	T02	Scenario	4	A cloud landing zone receives hundreds of thousands of files daily. Design ingestion so newly arrived files are processed incrementally and recover quickly after failure.	What assumptions shape this Streaming & Ingestion scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted scenario exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T02-004	T02	Incident	5	A streaming pipeline restarts and begins producing duplicate downstream records. Walk through likely causes and how you would make processing idempotent.	For Streaming & Ingestion, what evidence would you inspect first? How would you isolate the root cause? What recovery and prevention actions would you recommend?	Evidence-led Streaming & Ingestion diagnosis that isolates the cause, restores service safety and proposes measurable prevention controls.	Guesses at the Streaming & Ingestion cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted incident exercise focused on Streaming & Ingestion.	6	Active	1.2	Streaming & Ingestion	Advanced	Live assessor	Yes
RSA-T02-005	T02	Scenario	4	An operational source publishes inserts, updates and deletes out of order. Design the downstream change-processing logic.	What assumptions shape this Streaming & Ingestion scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted scenario exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T02-006	T02	Scenario	4	A dashboard needs data refreshed every few minutes, while another report can be refreshed hourly. Explain how freshness requirements influence pipeline and table choices.	What assumptions shape this Streaming & Ingestion scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted scenario exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T02-007	T02	Incident	4	A streaming query's state grows continuously and performance degrades. Explain what kinds of operations create state and how you would control growth.	For Streaming & Ingestion, what evidence would you inspect first? How would you isolate the root cause? What recovery and prevention actions would you recommend?	Evidence-led Streaming & Ingestion diagnosis that isolates the cause, restores service safety and proposes measurable prevention controls.	Guesses at the Streaming & Ingestion cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted incident exercise focused on Streaming & Ingestion.	5	Active	1.2	Streaming & Ingestion	Intermediate	Live assessor	Yes
RSA-T02-008	T02	Scenario	4	A schema change unexpectedly in incoming files and breaks a production ingestion job. Design a safer schema evolution and quarantine approach.	What assumptions shape this Streaming & Ingestion scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted scenario exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T02-009	T02	Concept	4	Compare checkpointing for streaming progress with transaction metadata for a Delta table. Why are they not the same thing?	Define Streaming & Ingestion in practical terms. Give an enterprise example and explain the value. What limitations and a clear validation approach?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T02	Complete Data Ingestion, Streaming & Change Processing and a targeted concept exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T02-010	T02	Objective Question	4	A online retailer must make a high-impact decision about Batch ingestion while schema evolution creates a competing constraint. Which response is most defensible? A) Select the most comprehensive option, add governance checkpoints, and resolve cost or operating concerns as implementation evidence becomes	Correct answer: B; requires advanced judgment about Batch ingestion, schema evolution, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Batch ingestion advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T02-011	T02	Objective Question	5	During Multi-source Ingestion case with late data, schema change and changed CDC requirements, an early demonstration of Auto Loader succeeds, but only under ideal conditions. What evidence is required before scaling? A) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable	Correct answer: C; requires advanced judgment about Auto Loader, checkpoints, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Auto Loader advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T02-012	T02	Objective Question	4	Two technically credible designs use Structured Streaming differently. One optimizes short-term delivery, the other improves CDC but adds complexity. How should the RSA decide? A) Combine the strongest elements of both designs and accept temporary distraction until operating evidence clarifies the preferred long-term	Correct answer: B; requires advanced judgment about Structured Streaming, CDC, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reusability; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Structured Streaming advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T02-013	T02	Objective Question	4	A production issue is attributed to schema evolution, although latency also changed for SCD1/SCD2. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first. B) Increase	Correct answer: A; requires advanced judgment about schema evolution, SCD1/SCD2, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	schema evolution advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T02-014	T02	Objective Question	5	The steering committee asks whether checkpoints is ready to support. Demonstrate correct incremental processing, state recovery and change-data handling. Which proof carries the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up.	Correct answer: C; requires advanced judgment about checkpoints, Auto CDC, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	checkpoints advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T02-015	T02	Objective Question	4	Security prioritizes watermarks, engineering prioritizes CDC, and operations raises concerns about Batch ingestion. What should happen next? A) Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Correct answer: A; requires advanced judgment about CDC, watermarks, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	CDC advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T02-016	T02	Objective Question	4	A new requirement invariants an assumption behind SCD1/SCD2 midway through delivery. Which action demonstrates senior judgment? A) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. B) Create a follow-on backlog item, but	Correct answer: D; requires advanced judgment about SCD1/SCD2, stateful processing, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	SCD1/SCD2 advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T02-017	T02	Objective Question	5	Which design review question most effectively exposes a hidden weakness in an approach centered on Auto CDC? A) Which assumptions have the weakest support, and what new evidence would be sufficient to change the recommended design or sequence? B) Which integration points carry the greatest	Correct answer: D; requires advanced judgment about Auto CDC, recovery/replay, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Auto CDC advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T02-018	T02	Objective Question	4	After a successful pilot, the online retailer must operationalize watermarks. Which operating model is strongest? A) Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks. B) Automate deployment and	Correct answer: A; requires advanced judgment about watermarks, Batch ingestion, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	watermarks advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T02-019	T02	Objective Question	4	An assessor challenges your recommendation because a crucial fact about stateful processing remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Acknowledge the uncertainty, explain its	Correct answer: B; requires advanced judgment about stateful processing, Auto Loader, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	stateful processing advanced decision — T02	Use Build an ingestion and change-processing flow with schema evolution, checkpoints and recovery to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes

RSA-T03-001	Concept	4	Compare a continuously maintained table, a materialized result and a conventional batch-built table. When would you choose each?	Define Streaming & Ingestion in practical terms, give an enterprise example and explain the value. What limitations or trade-offs should be acknowledged?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T03	Complete Lakewave Pipelines, Jobs & Data Quality and a targeted concept exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T03-002	Scenario	4	A team proposes a managed declarative pipeline for a multi-step ingestion and quality flow. What criteria would you use to decide whether that abstraction fits?	What assumptions shape this Streaming & Ingestion scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Streaming & Ingestion reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Streaming & Ingestion answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Streaming & Ingestion — T03	Complete Lakewave Pipelines, Jobs & Data Quality and a targeted scenario exercise focused on Streaming & Ingestion.	4	Active	1.2	Streaming & Ingestion	Intermediate	Either	Yes
RSA-T03-003	Deep Dive	4	What problem do Lakewave Spark Declarative Pipelines solve, and how would you decide whether to use declarative pipelines instead of hand-built jobs and notebooks?	Explain the mechanism behind Modern Data Engineering. What failure modes or limitations matter? How would you verify the behavior in practice?	Accurate Modern Data Engineering reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Modern Data Engineering answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Modern Data Engineering — T03	Complete Lakewave Pipelines, Jobs & Data Quality and a targeted deep dive exercise focused on Modern Data Engineering.	5	Active	1.2	Modern Data Engineering	Intermediate	Either	Yes
RSA-T03-004	Incident	5	A managed declarative pipeline is green, but a downstream table is missing late-arriving changes. How would you investigate the pipeline's incremental semantics and data-quality behavior?	For Modern Data Engineering, what evidence would you inspect first? How would you isolate the root cause? What recovery and prevention actions would you recommend?	Evidence-led Modern Data Engineering diagnosis that isolates the cause, restores service safely and proposes measurable prevention controls.	Guesstimates at the Modern Data Engineering cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Modern Data Engineering — T03	Complete Lakewave Pipelines, Jobs & Data Quality and a targeted incident exercise focused on Modern Data Engineering.	6	Active	1.2	Modern Data Engineering	Advanced	Live assessor	Yes
RSA-T03-005	Objective Question	5	A healthcare network must make a high-impact decision about Lakewave Declarative Pipelines while expectations creates a competing constraint. Which response is most defensible? A) Select the most comprehensive option, add governance checkpoints, and resolve cost or operating concerns as implementation evidence. B) Prioritize the most critical data-quality failure and implement workflow incident, an early demonstration of streaming tables succeeds, but only under ideal conditions. What evidence is required before scaling? C) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable across several	Correct answer: B; requires advanced judgment about Lakewave Declarative Pipelines, expectations, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Lakewave Declarative Pipelines advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T03-006	Objective Question	4	During Enterprise data-quality failure and intermittent workflow incident, an early demonstration of streaming tables succeeds, but only under ideal conditions. What evidence is required before scaling? A) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable across several	Correct answer: D; requires advanced judgment about Lakewave Declarative Pipelines, expectations, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	streaming tables advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T03-007	Objective Question	4	Two technically credible designs use materialized views differently. One optimizes short-term delivery, the other improves jobs but adds complexity. How should the RSA decide? A) Combine the strongest elements of both designs and accept temporary duplication until operating evidence clarifies the preferred long-term model. B) Score	Correct answer: B; requires advanced judgment about materialized views, jobs, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reusability; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	materialized views advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T03-008	Objective Question	5	A production issue is attributed to expectations, although telemetry also points for workflows. Which investigation sequence is strongest? A) Increase capacity, compare before-and-after metrics, and treat improved performance as evidence that resource pressure caused the incident. B) Tune the named component while holding	Correct answer: D; requires advanced judgment about materialized views, workflows, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	expectations advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T03-009	Objective Question	4	The steering committee asks whether data quality is ready to support the pipeline, review and defend the pipeline, workflow and quality design. Which proof carries the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up actions before	Correct answer: B; requires advanced judgment about data quality, dependencies, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional requirements, document assumptions and operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	data quality advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T03-010	Objective Question	4	Security prioritizes scheduling, engineering prioritizes jobs, and operations raises concerns about Lakewave Declarative Pipelines. What should happen next? A) Narrow the first release to unimpacted requirements and defer conflicting capabilities to a separate validation sprint with named owners. B) Ask the sponsor to decide	Correct answer: D; requires advanced judgment about jobs, scheduling, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare potential alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	jobs advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T03-011	Objective Question	5	A new requirement invalidates an assumption behind workflows midway through delivery. Which action demonstrates senior judgment? A) Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path. B) Implement the	Correct answer: A; requires advanced judgment about workflows, monitoring, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	workflows advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T03-012	Objective Question	4	Which design review question most effectively exposes a hidden weakness in an approach centered on dependencies? A) Which assumptions have the weakest support, and what new evidence would be sufficient to change the recommended design or sequencing? B) Which integration points carry the greatest	Correct answer: C; requires advanced judgment about dependencies, repair, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	dependencies advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T03-013	Objective Question	4	After a successful pilot, the healthcare network must operationalize scheduling. Which operating model is strongest? A) Automate deployment and monitoring, with the product team owning exceptions until service levels remain stable for an agreed period. B) Assign accountable ownership, service measures, monitoring.	Correct answer: B; requires advanced judgment about scheduling, Lakewave Declarative Pipelines, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	scheduling advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T03-014	Objective Question	5	An extension challenges your recommendation because a crucial fact about monitoring remains uncertain. Which answer is strongest? A) Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails. B) Gather additional expert	Correct answer: A; requires advanced judgment about monitoring, streaming tables, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	monitoring advanced decision — T03	Use Build a declarative pipeline and multi-task workflow with expectations, monitoring and a failure path to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T04-001	Concept	4	A team uses Python UDFs for transformations that could be expressed with built-in Spark functions. Why might this reduce throughput, and how would you decide whether to replace them?	Define Spark Performance & Internals in practical terms, give an enterprise example and explain the value. What limitations or trade-offs should be acknowledged?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on Spark Performance & Internals.	4	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T04-002	Practical	4	Given an event table with user_id and login_timestamp, write PySpark logic to flag users who return within a configurable number of days of their previous login.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-003	Practical	4	Given employee and manager relationships in one employee table, with SQL to find employees earning more than their direct manager and rank the highest differences.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-004	Practical	4	Write SQL or PySpark to identify all duplicate business keys in a dataset and persist the duplicate rows to a quarantine table for investigation.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-005	Practical	4	Return the three highest distinct salary levels within each department using PySpark, preserving ties correctly.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-006	Incident	5	A PySpark transformation spends far more time in Python execution than expected. Explain how you would identify whether UDF usage is the cause and alternatives you would consider.	For Spark Performance & Internals, what evidence would you inspect first? How would you isolate the root cause? What recovery and prevention actions would you recommend?	Evidence-led Spark Performance & Internals diagnosis that isolates the cause, restores service safely and proposes measurable prevention controls.	Guesstimates at the Spark Performance & Internals cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Spark Performance & Internals — T04	Complete SQL, PySpark & Data Engineering and a targeted incident exercise focused on Spark Performance & Internals.	6	Active	1.2	Spark Performance & Internals	Advanced	Live assessor	Yes
RSA-T04-007	Practical	4	Given events with entity_id, event_time and metric_value, write SQL to return each event and the immediately previous metric value for the same entity.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	5	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-008	Practical	4	Given activity records with entity_id and activity_date, write PySpark to identify entities with at least three activities within any rolling 14-day period.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-009	Practical	4	A dataset contains repeated business keys with different update timestamps. Write logic to retain only the latest record per key while preserving deterministic behavior.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-010	Practical	4	Write SQL to find departments whose average salary increased for three consecutive months from a monthly payroll table.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-011	Practical	4	Given user sessions, write PySpark to calculate the longest gap between consecutive sessions for each user.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-012	Practical	4	Write SQL to return products that have never been purchased, given product and order-line tables.	For SQL & PySpark Practical, explain the logic before coding, which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, ties, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes

RSA-T04-013	Practical	4	A 2-billion-row event table must be deduplicated by event, id while keeping the most trusted source and reinsert event when duplicates conflict. Sketch suitable PySpark logic and physical considerations.	For SQL & PySpark Practical, explain the logic before coding. Which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, readable solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, test, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	5	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-014	Practical	4	Write SQL to calculate the top two revenue-generating products per region, including ties.	For SQL & PySpark Practical, explain the logic before coding. Which edge cases and data-quality conditions must be handled? How would you test correctness and performance?	Correct, deterministic solution for SQL & PySpark Practical; deterministic handling of edge cases; appropriate scalability and testing rationale.	Incorrect or non-deterministic SQL & PySpark Practical logic; ignores nulls, duplicates, test, scale or testing.	SQL & PySpark Practical — T04	Complete SQL, PySpark & Data Engineering and a targeted practical exercise focused on SQL & PySpark Practical.	4	Active	1.2	SQL & PySpark Practical	Intermediate	Self-directed	Yes
RSA-T04-015	Objective Question	4	A telecom provider must make a high-impact decision about SQL, which joins creates a competing constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B) Define the outcome and non-negotiables.	Correct answer: B; requires advanced judgment about SQL, joins, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before implementation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	SQL advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T04-016	Objective Question	4	During Changing business logic and unexpected data-distribution cases, an early demonstration of PySpark succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor production closely for limitations not	Correct answer: B; requires advanced judgment about PySpark, partitioning, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	PySpark advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T04-017	Objective Question	5	One optimizes short-term delivery, the other improves Spark fundamentals but adds complexity. How should the RSA decide? A) Choose the faster design if it is reversible, then schedule a formal checkpoint after early usage data becomes available. B) Choose the	Correct answer: D; requires advanced judgment about transformations, Spark fundamentals, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility, document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Transformations advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T04-018	Objective Question	4	A production issue is attributed to joins, although telemetry also changed for reusable/modular code. Which investigation sequence is strongest? A) Tune the named component while holding other factors stable, then use incident telemetry to confirm whether the adjustment removed the cause. B) Form competing hypotheses,	Correct answer: B; requires advanced judgment about joins, reusable/modular code, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Joins advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T04-019	Objective Question	4	The steering committee asks whether partitioning is ready to support Defined implementation choices, correctness and engineering maintainability. Which proof carries the most weight? A) Obtain an independent design review with requirement traceability, operational readiness checks, and clear ownership for unresolved	Correct answer: C; requires advanced judgment about Spark fundamentals, engineering patterns, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including broader conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Partitioning advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T04-020	Objective Question	5	Security priorities engineering patterns, engineering priorities Spark fundamentals, and operations takes Spark fundamentals, engineering patterns, evidence and decision consequences. What should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and preferred compromise in writing. B)	Correct answer: D; requires advanced judgment about Spark fundamentals, engineering patterns, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory concerns from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Spark fundamentals advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T04-021	Objective Question	4	A new requirement invalidates an assumption behind reusable/modular code midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependency requires immediate redesign. B) Quantify the impact on	Correct answer: B; requires advanced judgment about SQL, joins, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, activities the cost, and deliver safety before the decision to record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Reusable/modular code advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T04-022	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on business transformation? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which integration points carry the greatest	Correct answer: A; requires advanced judgment about business transformations, PySpark, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Business transformations advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T04-023	Objective Question	5	After a successful pilot, the telecom provider must operationalize engineering patterns, which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assumes primary support responsibility. B) Transfer ownership as go-live using acceptance	Correct answer: C; requires advanced judgment about engineering patterns, transformations, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Engineering patterns advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T04-024	Objective Question	4	An assessor challenges your recommendation because a crucial fact about SQL remains uncertain. Which answer is strongest? A) Praise the decision until the uncertainty is fully resolved, then return with one firm recommendation and no conditional alternatives. B) Rank the recommendation as its sensitivity to the uncertainty, then	Correct answer: C; requires advanced judgment about SQL, joins, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	SQL advanced decision — T04	Use Implement the same business transformation in SQL and PySpark, then refactor it into reusable code to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-001	Scenario	4	You inherit a shared Delta dataset queried by many teams using unpredictable combinations of filters. Design the physical data layout for good performance without knowing one stable partition key.	What assumptions shape this Architecture & Dynamic Design scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Architecture & Dynamic Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Architecture & Dynamic Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Architecture & Dynamic Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Architecture & Dynamic Design.	4	Active	1.2	Architecture & Dynamic Design	Intermediate	Either	Yes
RSA-T05-002	Deep Dive	4	Explain how a Delta table provides transactional behavior on top of object storage and what artifacts make that possible.	Explain the mechanism behind Delta Lake & Physical Design. What failure modes or limitations matter? How would you verify the behavior in practice?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Delta Lake & Physical Design.	5	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-003	Incident	5	A data file belonging to a managed Delta dataset is removed directly from cloud storage outside the platform. What failure modes would you expect and how would you investigate safely?	For Delta Lake & Physical Design, what evidence would you inspect first? How would you isolate the root cause? What recovery and prevention actions would you recommend?	Evidence-led Delta Lake & Physical Design diagnosis that isolates the cause, restores service safety and proposes measurable prevention controls.	Guesses at the Delta Lake & Physical Design cause, charges compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted incident exercise focused on Delta Lake & Physical Design.	6	Active	1.2	Delta Lake & Physical Design	Advanced	Live assessor	Yes
RSA-T05-004	Scenario	4	A large Delta table has thousands of small files and several repeated selective queries. Propose a maintenance and layout strategy and explain when each technique is useful.	What assumptions shape this Delta Lake & Physical Design scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-005	Concept	4	How can metadata about data files help a query engine skip work before reading all rows? Give an example involving a range predicate.	Define Delta Lake & Physical Design in practical terms. Give an enterprise example and explain the value. What limitations or trade-offs should be acknowledged?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted concept exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-006	Incident	5	A production Spark pipeline that normally finishes in 25 minutes now takes more than an hour. Walk through your diagnostic sequence before changing code or cluster size.	For Spark Performance & Internals, what evidence would you inspect first? How would you isolate the root cause? What recovery and prevention actions would you recommend?	Evidence-led Spark Performance & Internals diagnosis that isolates the cause, reduces service safety and proposes measurable prevention controls.	Guesses at the Spark Performance & Internals cause, charges compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted incident exercise focused on Spark Performance & Internals.	6	Active	1.2	Spark Performance & Internals	Advanced	Live assessor	Yes
RSA-T05-007	Deep Dive	4	Two large datasets are joined repeatedly, while one dimension dataset is relatively small. Explain how you would choose a join strategy and what could go wrong if your size assumption is wrong.	Explain the mechanism behind Spark Performance & Internals. What failure modes or limitations matter? How would you verify the behavior in practice?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Spark Performance & Internals.	5	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-008	Deep Dive	4	During a heavy transformation, executors begin writing intermediate data to disk and performance collapses. Explain why this can happen and how you would isolate the cause.	Explain the mechanism behind Spark Performance & Internals. What failure modes or limitations matter? How would you verify the behavior in practice?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Spark Performance & Internals.	5	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-009	Concept	4	Explain how runtime plan adaptation can improve a Spark job when actual data characteristics differ from optimizer estimates.	Define Spark Performance & Internals in practical terms. Give an enterprise example and explain the value. What limitations or trade-offs should be acknowledged?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted concept exercise focused on Spark Performance & Internals.	4	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-010	Scenario	4	A platform supports Interactive BI, scheduled ETL, ad hoc exploration and automated jobs. Choose appropriate Databricks compute patterns for each workload and justify isolation, startup and cost trade-offs.	What assumptions shape this Compute & Spark Runtime scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Compute & Spark Runtime reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Compute & Spark Runtime answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Compute & Spark Runtime.	4	Active	1.2	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T05-011	Deep Dive	4	Explain the execution path of a Spark application from submitted work to tasks running across the cluster, including the responsibilities of the main runtime components.	Explain the mechanism behind Compute & Spark Runtime. What failure modes or limitations matter? How would you verify the behavior in practice?	Accurate Compute & Spark Runtime reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Compute & Spark Runtime answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Compute & Spark Runtime.	5	Active	1.2	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T05-012	Scenario	4	Databricks spend has risen sharply while business workload volume has grown only modestly. Build a fact-finding plan to determine where the additional cost is coming from.	What assumptions shape this Cost & FinOps scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Cost & FinOps reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Cost & FinOps answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Cost & FinOps — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Cost & FinOps.	4	Active	1.2	Cost & FinOps	Intermediate	Either	Yes
RSA-T05-013	Scenario	4	A shared Delta dataset is filtered differently by several business teams, and no single filter column dominates the physical layout strategy and explain how you would validate it.	What assumptions shape this Architecture & Dynamic Design scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Architecture & Dynamic Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Architecture & Dynamic Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Architecture & Dynamic Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Architecture & Dynamic Design.	4	Active	1.2	Architecture & Dynamic Design	Intermediate	Either	Yes
RSA-T05-014	Scenario	4	A daily process repeatedly evaluates overlapping predicates against a billion-row fact table. How would you redesign the workload to minimize redundant reads and computation?	What assumptions shape this Architecture & Dynamic Design scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Architecture & Dynamic Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Architecture & Dynamic Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Architecture & Dynamic Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Architecture & Dynamic Design.	4	Active	1.2	Architecture & Dynamic Design	Intermediate	Either	Yes

RSA-T05-015	T05	Concept	4	A team says Delta Lake is simply "Parquet with extra features." Explain what that statement misses and why the distinction matters operationally.	Define Delta Lake & Physical Design in practical terms... ...What limitations or trade-offs should be acknowledged?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted concept exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-016	T05	Incident	5	An engineer directly overwrites files inside a Delta table's storage path using an external tool. Reads later become inconsistent. Diagnose the likely failure mode and recovery approach.	For Delta Lake & Physical Design, what evidence would you inspect first?... ...What recovery and prevention actions would you recommend?	Evidence-led Delta Lake & Physical Design diagnosis that isolates the cause, restores service safely and proposes measurable prevention controls.	Guesses at the Delta Lake & Physical Design cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted incident exercise focused on Delta Lake & Physical Design.	6	Active	1.2	Delta Lake & Physical Design	Advanced	Live assessor	Yes
RSA-T05-017	T05	Scenario	4	A 20 TB Delta table receives frequent small micro-batches and now contains a very large number of tiny files. Explain the performance impact and maintenance strategy.	What assumptions shape this Delta Lake & Physical Design scenario?... ...How would you validate the recommendation?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-018	T05	Scenario	4	A table is filtered heavily by entity_id, date and category attributes, but filter combinations vary. Compare partitioning, clustering and ordering approaches for this workload.	What assumptions shape this Delta Lake & Physical Design scenario?... ...How would you validate the recommendation?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-019	T05	Deep Dive	4	Explain what a query engine can infer from file-level minimum/maximum statistics and give an example where those statistics become ineffective.	Explain the mechanism behind Delta Lake & Physical Design... ...What failure modes or limitations matter?... ...How would you verify the behavior in practice?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Delta Lake & Physical Design.	5	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-020	T05	Scenario	4	A compliance team asks to shorten data retention aggressively to save storage. Explain how retention cleanup differs from performance optimization and what risks you would review.	What assumptions shape this Delta Lake & Physical Design scenario?... ...How would you validate the recommendation?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-021	T05	Scenario	4	Two teams debate managed versus external tables for a governed production platform. Frame the decision using lifecycle, ownership and operational considerations.	What assumptions shape this Delta Lake & Physical Design scenario?... ...How would you validate the recommendation?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-022	T05	Scenario	4	A frequently queried table has been repeatedly optimized, yet data skewing remains poor. Explain how you would determine whether the current physical organization matches actual query patterns.	What assumptions shape this Delta Lake & Physical Design scenario?... ...How would you validate the recommendation?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Delta Lake & Physical Design.	4	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-023	T05	Incident	4	A Spark stage has 2,000 tasks: most finish in seconds while a handful run for 20 minutes. Walk through your diagnosis and remediation options.	For Spark Performance & Internals, what evidence would you inspect first?... ...What recovery and prevention actions would you recommend?	Evidence-led Spark Performance & Internals diagnosis that isolates the cause, restores service safely and proposes measurable prevention controls.	Guesses at the Spark Performance & Internals cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted incident exercise focused on Spark Performance & Internals.	5	Active	1.2	Spark Performance & Internals	Intermediate	Live assessor	Yes
RSA-T05-024	T05	Scenario	4	A team broadcasts a dimension table because it is usually small, but occasional runs fail with memory pressure. Design a safer join strategy.	What assumptions shape this Spark Performance & Internals scenario?... ...How would you validate the recommendation?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Spark Performance & Internals.	4	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-025	T05	Deep Dive	4	A wide aggregation causes heavy shuffle and disk spill. Explain the chain of events from transformation to spill and the levers you would examine.	Explain the mechanism behind Spark Performance & Internals... ...What failure modes or limitations matter?... ...How would you verify the behavior in practice?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Spark Performance & Internals.	5	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-026	T05	Concept	4	Describe three situations where runtime statistics can justify changing the physical execution plan after a Spark job has started.	Define Spark Performance & Internals in practical terms... ...What limitations or trade-offs should be acknowledged?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted concept exercise focused on Spark Performance & Internals.	4	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-027	T05	Scenario	4	A job creates millions of tiny shuffle partitions after a large join. Explain how you would reason about partition count rather than choosing a fixed number by habit.	What assumptions shape this Spark Performance & Internals scenario?... ...How would you validate the recommendation?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Spark Performance & Internals.	4	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-028	T05	Incident	4	A pipeline slowed after a code change, but cluster configuration is unchanged. Describe how you would compare old and new execution behavior.	For Spark Performance & Internals, what evidence would you inspect first?... ...What recovery and prevention actions would you recommend?	Evidence-led Spark Performance & Internals diagnosis that isolates the cause, restores service safely and proposes measurable prevention controls.	Guesses at the Spark Performance & Internals cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted incident exercise focused on Spark Performance & Internals.	5	Active	1.2	Spark Performance & Internals	Intermediate	Live assessor	Yes
RSA-T05-029	T05	Concept	4	Explain the roles of the driver, executors, jobs, stages and tasks using one concrete transformation example.	Define Spark Performance & Internals in practical terms... ...What limitations or trade-offs should be acknowledged?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted concept exercise focused on Spark Performance & Internals.	4	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-030	T05	Scenario	4	A dataset is repeatedly cached but each downstream action still performs expensive work. Explain how you would verify whether caching is effective and whether it should exist at all.	What assumptions shape this Spark Performance & Internals scenario?... ...How would you validate the recommendation?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Spark Performance & Internals.	4	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-031	T05	Deep Dive	4	A query plan chooses a sort-merge join, but you expected another strategy. Explain what inputs and optimizer decisions you would inspect before forcing a hint.	Explain the mechanism behind Spark Performance & Internals... ...What failure modes or limitations matter?... ...How would you verify the behavior in practice?	Accurate Spark Performance & Internals reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Spark Performance & Internals answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Spark Performance & Internals — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Spark Performance & Internals.	5	Active	1.2	Spark Performance & Internals	Intermediate	Either	Yes
RSA-T05-032	T05	Scenario	4	A team uses one all-purpose cluster for ETL, notebooks and executive dashboards. Explain the operational problems this can create and redesign the compute strategy.	What assumptions shape this Compute & Spark Runtime scenario?... ...How would you validate the recommendation?	Accurate Compute & Spark Runtime reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Compute & Spark Runtime answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Compute & Spark Runtime.	4	Active	1.2	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T05-033	T05	Scenario	4	A scheduled nightly ETL workload is predictable and idle during the day. What compute characteristics would you optimize for?	What assumptions shape this Compute & Spark Runtime scenario?... ...How would you validate the recommendation?	Accurate Compute & Spark Runtime reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Compute & Spark Runtime answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Compute & Spark Runtime.	4	Active	1.2	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T05-034	T05	Scenario	4	Hundreds of analysts run short interactive SQL queries during business hours. Design the serving compute with concurrency, latency and governance in mind.	What assumptions shape this Compute & Spark Runtime scenario?... ...How would you validate the recommendation?	Accurate Compute & Spark Runtime reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Compute & Spark Runtime answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Compute & Spark Runtime.	4	Active	1.2	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T05-035	T05	Deep Dive	4	A Spark application contains several transformations but only one action. Explain when work is planned versus executed and how that becomes jobs, stages and tasks.	Explain the mechanism behind Compute & Spark Runtime... ...What failure modes or limitations matter?... ...How would you verify the behavior in practice?	Accurate Compute & Spark Runtime reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Compute & Spark Runtime answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Compute & Spark Runtime.	5	Active	1.2	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T05-036	T05	Incident	4	Driver memory fails while executors have plenty of free memory. Give likely coding/design causes and how you would investigate.	For Compute & Spark Runtime, what evidence would you inspect first?... ...What recovery and prevention actions would you recommend?	Evidence-led Compute & Spark Runtime diagnosis that isolates the cause, restores service safely and proposes measurable prevention controls.	Guesses at the Compute & Spark Runtime cause, changes compute or code before collecting evidence, or lacks safe recovery and prevention steps.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted incident exercise focused on Compute & Spark Runtime.	5	Active	1.2	Compute & Spark Runtime	Intermediate	Live assessor	Yes
RSA-T05-037	T05	Concept	4	Explain how Catalyst and whole-stage/code generation concepts influence why native Spark expressions often outperform opaque custom logic.	Define Compute & Spark Runtime in practical terms... ...What limitations or trade-offs should be acknowledged?	Accurate Compute & Spark Runtime reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Compute & Spark Runtime answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Compute & Spark Runtime — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted concept exercise focused on Compute & Spark Runtime.	4	Active	1.2	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T05-038	T05	Scenario	4	Two job processes similar data volumes, but one costs three times more. Build a method to attribute and explain the difference.	What assumptions shape this Cost & FinOps scenario?... ...How would you validate the recommendation?	Accurate Cost & FinOps reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Cost & FinOps answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Cost & FinOps — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Cost & FinOps.	4	Active	1.2	Cost & FinOps	Intermediate	Either	Yes
RSA-T05-039	T05	Scenario	4	Finance asks for cost per business domain rather than total workspace spend. Design a taggaguge attribution model.	What assumptions shape this Cost & FinOps scenario?... ...How would you validate the recommendation?	Accurate Cost & FinOps reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Cost & FinOps answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Cost & FinOps — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Cost & FinOps.	4	Active	1.2	Cost & FinOps	Intermediate	Either	Yes
RSA-T05-040	T05	Scenario	4	A cluster auto-scales aggressively during peak hours but remains underutilized afterward. Explain what metrics and configuration you would examine to reduce waste without hurting SLAs.	What assumptions shape this Cost & FinOps scenario?... ...How would you validate the recommendation?	Accurate Cost & FinOps reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Cost & FinOps answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Cost & FinOps — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Cost & FinOps.	4	Active	1.2	Cost & FinOps	Intermediate	Either	Yes

RSA-T05-041	T05	Deep Dive	4	How does liquid clustering change the physical-design conversation for large Delta Lake tables compared with static partitioning or manually maintained Z-ordering?	Explain the mechanism behind Delta Lake & Physical Design. What failure modes or limitations matter? How would you verify its behavior in practice?	Accurate Delta Lake & Physical Design reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Delta Lake & Physical Design answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Delta Lake & Physical Design — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted deep dive exercise focused on Delta Lake & Physical Design.	5	Active	1.2	Delta Lake & Physical Design	Intermediate	Either	Yes
RSA-T05-042	T05	Scenario	4	A team wants to move interactive SQL notebooks and jobs to serverless compute. How would you decide which workloads are suitable and what operational changes the team should expect?	What assumptions shape this Databricks Compute & Operations scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Databricks Compute & Operations reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Databricks Compute & Operations answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Databricks Compute & Operations — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted scenario exercise focused on Databricks Compute & Operations.	4	Active	1.2	Databricks Compute & Operations	Intermediate	Either	Yes
RSA-T05-043	T05	Customer Simulation	4	A business sponsor expects serverless SQL and A/B/I to reduce cost automatically. How would you frame the cost model and the controls needed to prevent an unexpected spend increase?	What would you clarify with the stakeholder first? How would you explain the Cost, APIs & Integrations recommendation and trade-offs? What evidence or next step would build confidence?	Clear stakeholder-aware reasoning on Cost, APIs & Integrations, with discovery, explicit trade-offs, credible implications and a practical next step.	Feature-dumps, uses unexplained jargon, skips discovery, hides trade-offs or cannot define evidence and next steps for Cost, APIs & Integrations.	Cost, APIs & Integrations — T05	Complete Delta Lake, Performance, Compute & Cost Optimization and a targeted customer simulation exercise focused on Cost, APIs & Integrations.	5	Active	1.2	Cost, APIs & Integrations	Intermediate	Live assessor	Yes
RSA-T05-044	T05	Objective Question	4	A media platform must make a high-impact decision about Delta internals while table maintenance creates a competing constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B) Define the	Correct answer: B; requires advanced judgment about Delta internals, table maintenance, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Delta internals advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-045	T05	Objective Question	5	During table maintenance, skew, UTF or positive bottleneck, compute compatibility constraint, SLA deterioration and cost pressure, an early demonstration of ACID succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder	Correct answer: C; requires advanced judgment about ACID, data skipping, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	ACID advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T05-046	T05	Objective Question	4	Two technically credible designs use file statistics differently. One optimizes short-term delivery, the other improves liquid clustering but adds complexity. How should the RSA decide? A) Choose the faster design if it is reversible, then schedule a formal checkpoint after early usage data becomes available. B) Choose the more	Correct answer: D; requires advanced judgment about file statistics, liquid clustering, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility, document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	file statistics advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-047	T05	Objective Question	4	A production issue is attributed to table maintenance, although telemetry also changed for Spark execution plans. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change	Correct answer: A; requires advanced judgment about table maintenance, Spark execution plans, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	table maintenance advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-048	T05	Objective Question	5	The steering committee asks whether data skipping is ready to equip Spark queries on uneven performance, skipping AQE, evidence and decision consequences.	Correct answer: C; requires advanced judgment about data skipping, AQE, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	data skipping advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T05-049	T05	Objective Question	4	Obtain an independent design review with requirement traceability, operational readiness checks, and clear ownership for unresolved	Correct answer: B; requires advanced judgment about security, pipeline bottlenecks, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	liquid clustering advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-050	T05	Objective Question	4	Security prioritizes skew, engineering prioritizes liquid clustering, and operations concerns about UTF overhead. What should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and ordered compromise to writing. B) Translate concerns into	Correct answer: B; requires advanced judgment about Spark execution plans, shuffles, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery, update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Spark execution plans advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-051	T05	Objective Question	5	A new requirement invalidates an assumption behind Spark execution plans midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependencies requires immediate redesign. B) Quantify the impact on	Correct answer: D; requires advanced judgment about AQE, split, evidence and decision consequences.	What critical condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	AQE advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T05-052	T05	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on AQE? A) Which integration points carry the greatest uncertainty, and how have compatible teams reduced similar implementation and operating risks? B) Could the design meet current requirements with fewer	Correct answer: B; requires advanced judgment about AQE, split, evidence and decision consequences.	What critical condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	skew advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-053	T05	Objective Question	4	After a successful pilot, the media platform must operationalize skew. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assumes primary support responsibility. B) Assign accountable specialists, service measures, monitoring,	Correct answer: B; requires advanced judgment about shifts, pipeline bottlenecks, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	shuffles advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T05-054	T05	Objective Question	4	An assessor challenges your recommendation because a crucial fact about shuffles remains uncertain. Which answer is strongest? A) Pause the decision until the uncertainty is fully resolved, then return with one firm recommendation and no conditional alternatives. B) Acknowledge the uncertainty, explain its decision impact, define the	Correct answer: A; requires advanced judgment about shifts, pipeline bottlenecks, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest critical test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	shuffles advanced decision — T05	Use Impact Delta layout, file statistics and execution plans, select compatible compute; diagnose bottlenecks and optimize a deliberately slow or costly workload to practice assumptions, alternatives, failure conditions, validation evidence	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T06-001	T06	Architecture Case	5	Design a governance model for a regulated organization with several business units sharing one data platform while sensitive datasets require tightly controlled access and traceability.	Which requirements and constraints drive the Governance & Unity Catalog design? What alternatives and trade-offs do you consider? How would you validate the architecture before scaling it?	Accurate Governance & Unity Catalog reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Governance & Unity Catalog answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Governance & Unity Catalog — T06	Complete Unity Catalog, Security & Data Governance and a targeted scenario exercise focused on Governance & Unity Catalog.	6	Active	1.2	Governance & Unity Catalog	Advanced	Live assessor	Yes
RSA-T06-002	T06	Scenario	4	A company is moving from workspace-local permissions to centralized governance. Outline a safe implementation sequence that minimizes disruption.	What assumptions shape this Governance & Unity Catalog scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Governance & Unity Catalog reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Governance & Unity Catalog answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Governance & Unity Catalog — T06	Complete Unity Catalog, Security & Data Governance and a targeted scenario exercise focused on Governance & Unity Catalog.	4	Active	1.2	Governance & Unity Catalog	Intermediate	Either	Yes
RSA-T06-003	T06	Scenario	4	An organization wants most analysts to see de-identified sensitive records while a small authorized group can access identified data. Design the governance approach.	What assumptions shape this Governance & Unity Catalog scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Governance & Unity Catalog reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Governance & Unity Catalog answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Governance & Unity Catalog — T06	Complete Unity Catalog, Security & Data Governance and a targeted scenario exercise focused on Governance & Unity Catalog.	4	Active	1.2	Governance & Unity Catalog	Intermediate	Either	Yes
RSA-T06-004	T06	Scenario	4	Two business units need to share curated datasets while retaining independent ownership. Explain how you would structure ownership and grants.	What assumptions shape this Governance & Unity Catalog scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Governance & Unity Catalog reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Governance & Unity Catalog answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Governance & Unity Catalog — T06	Complete Unity Catalog, Security & Data Governance and a targeted scenario exercise focused on Governance & Unity Catalog.	4	Active	1.2	Governance & Unity Catalog	Intermediate	Either	Yes
RSA-T06-005	T06	Migration	4	A company has years of workspace-local objects and permissions. Build a migration plan to centralized governance with minimal business disruption.	What assumptions shape this Governance & Unity Catalog scenario? Which design or operating trade-offs matter? How would you validate the recommendation?	Accurate Governance & Unity Catalog reasoning with explicit assumptions, relevant trade-offs, implementation implications and a clear validation approach.	Generic Governance & Unity Catalog answer with hidden assumptions, no trade-off reasoning and no practical validation method.	Governance & Unity Catalog — T06	Complete Unity Catalog, Security & Data Governance and a targeted migration exercise focused on Governance & Unity Catalog.	5	Active	1.2	Governance & Unity Catalog	Intermediate	Live assessor	Yes
RSA-T06-006	T06	Incident	4	An auditor asks who changed access to a sensitive dataset and who queried it during a specific period. Explain what governance and audit capabilities you would rely on.	What events must be retained? How do identify and object lineage help?	Understands audit log/system data, identifies, privileges and lineage context.	Cannot distinguish lineage from access audit.	Auditability	Governance audit exercises	4	Active	1.1	Governance & Unity Catalog	Intermediate	Live assessor	Yes
RSA-T06-007	T06	Architecture Case	5	Design catalog and schema boundaries for a multinational company with regional data restrictions and shared global reference data.	What steps regionally? What can be shared? How do you prevent accidental cross-region access?	Combines organization/domain boundaries with residency, controlled sharing and least privileges.	One global unrestricted catalog; no residency controls.	Regional governance	Data residency governance lab	6	Active	1.1	Governance & Unity Catalog	Advanced	Live assessor	Yes
RSA-T06-008	T06	Scenario	4	A service principal used by pipelines has broad ownership permissions because it was convenient during development. Redesign the access model for production.	What permissions are actually required? How are credentials managed? How do you separate deployment from runtime?	Least privileges, service identities, separation of duties, credential controls and scoped grants.	Keeps admin/owner privileges for runtime.	Service identity governance	Least privilege pipeline identity lab	4	Active	1.1	Governance & Unity Catalog	Intermediate	Either	Yes
RSA-T06-009	T06	Scenario	4	A team sets whether centralized governance is only an access-control feature. Explain the broader operational value using concrete examples.	What about discovery? Lineage? Ownership? Cross-workspace consistency?	Covers centralized permissions plus discovery, lineage, ownership, consistent governance.	Defines only three-level namespace.	Governance fundamentals	Unity Catalog capability module	4	Active	1.1	Governance & Unity Catalog	Intermediate	Either	Yes
RSA-T06-010	T06	Scenario	5	A data product must expose selected columns to external consumers without giving them access to the underlying platform. Describe the governance considerations and possible sharing pattern.	How do you minimize exposed data? How is revocation handled? How do you audit sharing?	Controlled data sharing, least exposure, lifecycle/location and audit thinking.	Shares storage credentials or workspace account.	External data sharing	Secure sharing architecture lab	5	Active	1.1	Governance & Unity Catalog	Advanced	Either	Yes
RSA-T06-011	T06	Deep Dive	4	What role does Unity Catalog play in a modern Databricks architecture when the organization exposes data and AI capabilities to many more business users?	Which securable objects matter beyond tables? How do lineage, discovery and auditing help? What changes in the access model at scale?	Explains centralized governance, discovery, lineage, auditing and consistent permissions across data and AI assets, addresses scalable groups, least privileges, ownership and governed self-service.	Describes Unity Catalog as only a table list; relies on direct user grants; ignores AI assets, lineage and auditability.	Unity Catalog at enterprise scale	Unity Catalog securables, lineage and group-based access design lab	4	Active	1.2	Unity Catalog & Data Democratization	Intermediate	Either	Yes
RSA-T06-012	T06	Architecture Case	5	Design a Unity Catalog hierarchy for a global enterprise with multiple business units, regulated regions and shared data products. Explain where you use metastores, catalogs, schemas and workspaces.	What boundaries are driven by region or regulation? How are shared permissions exposed? How do you avoid catalog sprawl?	Uses regulatory and isolation requirements to choose a regulated region; treats workspaces as collaboration surfaces rather than the primary data boundary.	Creates a metastore per team without need; uses on direct user grants; ignores AI assets, lineage and auditability.	Unity Catalog hierarchy design	Enterprise metastore and catalog design scenario	5	Active	1.2	Unity Catalog & Data Democratization	Advanced	Live assessor	Yes
RSA-T06-013	T06	Scenario	4	A client wants to query operational databases and external warehouses from Databricks without immediately copying all data. When would Lakehouse Federation be appropriate, and when would you still ingest the data?	How do latency, pushdown and source impact affect the decision? Which data should be materialized? How does governance apply?	Distinguishes exploratory or low-copy access from high-scale repeated processing; considers source limits, pushdown, latency, consistency, cost and governed access before deciding to federate or ingest.	Assumes federation has identical performance to local Data data; ignores source-system impact; copies everything by default.	Lakehouse Federation decision	Federation-versus-ingestion workload assessment lab	4	Active	1.2	Federation & Open Data Access	Intermediate	Either	Yes

RSA-T06-014	T06	Customer Simulation	4	An enterprise needs to share governed data products with partners who use different clouds and data platforms. How would you explain an open sharing approach and the controls required before exposing data?	How are recipients identified and revoked? How do you limit the shared surface? What audit and contractual controls are needed?	Explains open, cross-platform sharing without uncontrolled file copies, covers recipient authentication, least-privilege objects, views, auditing, revocation, data classification and contractual controls.	Suggests emailing exports or granting storage access; assumes external sharing removes governance obligations; cannot describe revocation.	Open data sharing governance	Design a partner-sharing pattern using governed shares and audit controls	4	Active	1.2	Federation & Open Data Access	Intermediate	Live assessor	Yes
RSA-T06-015	T06	Scenario	5	An enterprise plans to expose Genie and A/B/I to thousands of employees. Design the governance and rollout controls needed before broad adoption.	How are spaces certified and owned? How are groups and sensitive data handled? What usage and quality signals are monitored?	Proposes domain ownership, certified data products and spaces, group-based least privilege, row or column controls, auditing, usage monitoring, feedback, training and phased rollout with measurable quality gates.	Opens broad access first and governs later; grants users directly; measures adoption but not answer quality or sensitive-data exposure.	Governed self-service analytics rollout	Enterprise A/B/I governance and phased-adoption playbook	5	Active	1.2	Unity Catalog & Data Democratization	Advanced	Live assessor	Yes
RSA-T06-016	T06	Objective Question	5	A insurance group must make a high-impact decision about Catalog/schema architecture while lineage creates a competing concern. Which response is most defensible? A) Select the most comprehensive option, add governance checkpoints, and resolve cost or operating concerns as implementation evidence becomes available. B) Prioritize lineage, then address governance. C) Prioritize governance, then address lineage. D) Prioritize governance, then address lineage, then address cost.	Correct answer: D; requires advanced judgment about Catalog/schema architecture, lineage, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Catalog/schema architecture advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T06-017	T06	Objective Question	4	During frequent multi-team environment requiring governed internal and external access, an early demonstration of permissions succeeds, but only under ideal conditions. What evidence is required before scaling? A) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable. B) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable. C) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable. D) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable.	Correct answer: B; requires advanced judgment about permissions, auditing, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	permissions advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T06-018	T06	Objective Question	4	Two technically credible designs use workspace isolation differently. One optimizes short-term delivery; the other improves privacy but adds complexity. How should the RSA decide? A) Combine the strongest elements of both designs and accept temporary degradation until operating evidence clarifies the choice. B) Prioritize the design that optimizes short-term delivery. C) Prioritize the design that improves privacy. D) Prioritize the design that improves privacy.	Correct answer: B; requires advanced judgment about workspace isolation, privacy, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify whether that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	workspace isolation advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T06-019	T06	Objective Question	5	A production issue is attributed to lineage, although telemetry also changed for federation. Which investigation sequence is strongest? A) Increase capacity, compare before and after metrics, and test improved performance as evidence that resource pressure caused the incident. B) Turn the named component while holding other components steady. C) Increase capacity, compare before and after metrics, and test improved performance as evidence that resource pressure caused the incident. D) Turn the named component while holding other components steady.	Correct answer: D; requires advanced judgment about lineage, federation, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	lineage advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T06-020	T06	Objective Question	4	The steering committee asks whether auditing is ready to support "defined an independent security and governance architecture." Which proof carries the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up actions before requesting approval. B) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up actions before requesting approval. C) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up actions before requesting approval. D) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up actions before requesting approval.	Correct answer: B; requires advanced judgment about auditing, Delta Sharing, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	auditing advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T06-021	T06	Objective Question	4	A security prioritizes enterprise governance patterns, engineering privacy, and operations raises concerns about workspace isolation. What should happen next? A) Narrow the risk to unidirectional requirements and defer conflicting capabilities to a separate validation sprint with named owners. B) Narrow the risk to unidirectional requirements and defer conflicting capabilities to a separate validation sprint with named owners. C) Narrow the risk to unidirectional requirements and defer conflicting capabilities to a separate validation sprint with named owners. D) Narrow the risk to unidirectional requirements and defer conflicting capabilities to a separate validation sprint with named owners.	Correct answer: B; requires advanced judgment about privacy, enterprise governance patterns, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	privacy advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T06-022	T06	Objective Question	5	A new requirement invalidates an assumption behind federation through Delta Sharing. Which action demands the most judgment? A) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. B) Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path. C) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. D) Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Correct answer: B; requires advanced judgment about Delta Sharing, permissions, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	federation advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T06-023	T06	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on Delta Sharing? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which assumptions have the weakest support, and how would they be validated? C) Which assumptions have the weakest support, and how would they be validated? D) Which assumptions have the weakest support, and how would they be validated?	Correct answer: A; requires advanced judgment about Delta Sharing, permissions, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Delta Sharing advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T06-024	T06	Objective Question	4	After a successful pilot, the insurance group must operationalize enterprise governance patterns. Which operating model is strongest? A) Automate deployment and monitoring, with the product team owning exceptions until service levels remain stable for an agreed period. B) Assign accountable ownership, services, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks. C) Assign accountable ownership, services, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks. D) Assign accountable ownership, services, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Correct answer: B; requires advanced judgment about enterprise governance patterns, workspace isolation, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	enterprise governance patterns advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T06-025	T06	Objective Question	5	An assessor challenges your recommendation because a crucial fact about Catalog/schema architecture remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Acknowledge the uncertainty, define the smallest credible test, and describe the alternative if the assumption fails. C) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. D) Acknowledge the uncertainty, define the smallest credible test, and describe the alternative if the assumption fails.	Correct answer: B; requires advanced judgment about Catalog/schema architecture, lineage, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Catalog/schema architecture advanced decision — T06	Use Design catalog, schema, access, lineage, federation and sharing controls to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T07-001	T07	Scenario	5	A data platform evaluates hundreds of business rules over a very large customer dataset every day. The rules are maintained by business teams and change frequently. Design an approach that avoids repeatedly scanning the full dataset for every rule.	How would you represent rules as metadata? How would you group or consolidate execution? What would you precompute? How would you handle rules change without redeployment?	Candidate decomposes rule execution, separates metadata from code, reduces redundant scans, discusses scalability and maintainability.	Proposes one full-table query per rule; hard-codes rules into code; reduces redundant scans for reducing scans.	Architecture / metadata-driven processing	Design a metadata-driven rules engine lab; query consolidation; predicate evaluation patterns	5	Active	1	Architecture & Dynamic Design	Advanced	Either	Yes
RSA-T07-002	T07	Architecture Case	5	A multi-tenant analytics platform lets each customer define its own filter logic. New customers and new rules arrive daily. Sketch an architecture that keeps application code stable while allowing controlled rule evolution.	How are invalid rules prevented? How do you version rules? How do you audit which rule version produced an outcome?	Metadata-driven configuration, validation, versioning, controlled execution, auditability and scalable processing observability	Trusts arbitrary strings as trusted executable code; no versioning/audit controls.	Configurable enterprise architecture	Metadata framework design + governance exercise	4	Active	1	Architecture & Dynamic Design	Advanced	Live assessor	Yes
RSA-T07-003	T07	Scenario	4	An operations team wants a dashboard showing job status, runtime and estimated platform consumption without manually opening the DataBricks UI. Describe how you would design the integration.	Which APIs/system data would you consider? How do you authenticate? How do you correlate run with usage?	Understands Jobs/API-driven integration, authentication, run metadata and cost/usage correlation conceptually.	Suggests scraping the UI into API/authentication model.	Jobs/API integration	DataBricks API integration lab	4	Active	1	APIs & Automation	Intermediate	Either	Yes
RSA-T07-004	T07	Scenario	4	A BI team needs governed access from Power BI to curated DataBricks data. Describe the connection architecture and the operational/security choices you would clarify before implementation.	What compute endpoint serves BI? How is identity handled? Impact vs direct query considerations?	Understands DataBricks SQL/connectors-style architecture, governance, governed access and performance trade-off considerations.	Shares personal credentials; no compute/governance consideration.	BI integration	Power BI–DataBricks connectivity lab	3	Active	1	Integration & Serving	Intermediate	Either	Yes
RSA-T07-005	T07	Scenario	4	A logistics company lets regional teams define hundreds of alignment-quality rules that change weekly. Design a framework that can execute those rules at scale without a code release for every change.	How are rules stored and validated? How would you reduce repeated scans? How would you audit rules versions?	Separates rule metadata from execution code; validates expressions; consolidates scans where possible; versions and audits rules.	Hard-codes each rule; executes one full scan per rule; no validation/versioning.	Metadata-driven architecture	Metadata rule-engine design lab	5	Active	1.1	Architecture & Dynamic Design	Intermediate	Either	Yes
RSA-T07-006	T07	Architecture Case	5	You must support 40 tenants on a shared lakehouse while allowing tenant-specific transformations and policies. Design the control plane and data plane as customizations does not create 40.	Where does tenant configuration live? How do you isolate failure? How do you deploy shared logic safely?	Configuration-driven design, tenant isolation, reusable pipelines, versioning, observability and controlled executability	Forks code per tenant; no isolation or version control.	Multi-tenant architecture	Multi-tenant lakehouse design workshop	6	Active	1.1	Architecture & Dynamic Design	Advanced	Live assessor	Yes
RSA-T07-007	T07	Scenario	5	A rules platform accepts expressions authored by business users. Design safeguards so flexibility does not become a security, correctness or performance problem.	How are expressions parsed? What operations are prohibited? How do you test expensive rules?	Validation/low-listing, safe expression model, governance, resource controls, versioning and testing.	Executes arbitrary user code/SQL unchecked.	Safe dynamic execution	Secure rules-engine exercise	5	Active	1.1	Architecture & Dynamic Design	Advanced	Either	Yes
RSA-T07-008	T07	Scenario	4	A machine-learning team wants long-lived interactive compute while production jobs require strict reproducibility. Explain why their compute policies may differ.	What libraries/configuration need control? How does isolation matter?	Differentiates exploratory vs production reproducibility, policies and lifecycle.	Uses identical unrestricted compute for both.	Compute governance	Compute policy workshop	4	Active	1.1	Compute & Spark Runtime	Intermediate	Either	Yes
RSA-T07-009	T07	Scenario	5	A platform must operate across development, test and production with controlled library/runtime upgrades. Design the compute and release approach.	How do runtime versions move? How are policies enforced? How do you roll back?	Environment separation, policies, version promotion, testing and rollback.	Upgrades production notebooks directly.	Runtime governance	Runtime upgrade/release lab	5	Active	1.1	Compute & Spark Runtime	Advanced	Either	Yes
RSA-T07-010	T07	Scenario	4	Build an operational service that triggers a job, monitors its run, captures failure details and exposes status to another application.	Which API lifecycle calls? How is authentication handled? How do you handle retries?	API-driven job trigger/status, auth, error handling, idempotency/calls.	Screen scraping; embeds personal token in code.	Jobs API automation	Jobs API integration lab	5	Active	1.1	APIs & Automation	Intermediate	Either	Yes
RSA-T07-011	T07	Scenario	4	An internal dashboard needs real current usage and cost information. Explain how you would source the data and what limitations you would communicate.	Which system/logging data exists? Is per-query cost exact? How do you allocate shared compute?	Uses supported usage/system/logging sources and distinguishes direct vs allocated cost.	Prioritizes exact real-time per-query cost without qualification.	Cost observability	Usage/cost data lab	5	Active	1.1	APIs & Automation	Intermediate	Either	Yes
RSA-T07-012	T07	Scenario	4	Power BI users complain of slow dashboard refreshes against DataBricks. Outline the layers you would investigate before tuning SQL.	Import/direct models? Endpoint concurrency? Query plan/data layout?	End-to-end BI mode, network/auth, SQL compute, concurrency, query/layout diagnosis.	Only increases Power BI timeout.	BI performance	Power BI integration performance lab	4	Active	1.1	Integration & Serving	Intermediate	Either	Yes
RSA-T07-013	T07	Scenario	4	A service needs machine-to-machine access to DataBricks APIs. Design the authentication and secret-management approach.	Would you use a human token? How are credentials rotated?	Service identity/OAuth or supported machine auth, secret storage, least privilege and rotation.	Hard-coded personal access token in source code.	API authentication	Service authentication lab	4	Active	1.1	Integration & Serving	Intermediate	Either	Yes
RSA-T07-014	T07	Architecture Case	5	Design a governed serving layer for BI tools and external applications consuming curated lakehouse data with different latency needs.	Which interfaces/endpoints serve each consumer? How is identity/governance preserved?	Workload-specific serving interfaces, SQL/API/sharing choices, governance, latency and cost trade-offs.	Owns direct storage credentials to all consumers.	Serving integration	Lakehouse serving architecture lab	6	Active	1.1	Integration & Serving	Advanced	Live assessor	Yes

RSA-T07-015	T07	Objective Question	4	A energy company must make a high-impact decision about OR while project structure creates a competing constraint. Which response is most defensible? A) Flow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B) Choose the	Correct answer: D; requires advanced judgment about OR, project structure, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Git advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T07-016	T07	Objective Question	4	During Fagile notebook estate with API, BI connectivity, operational integration, release and rollback requirements, an early demonstration of testing succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor	Correct answer: D; requires advanced judgment about testing, REST APIs, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	testing advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T07-017	T07	Objective Question	5	Two technically credible designs use CI/CD differently. One optimizes short term delivery, the other improves SDKs but adds complexity. How should the RSA decide? A) Choose the latter design if it is reversible, then schedule a formal checkpoint after early usage data becomes available. B) Choose the more controlled	Correct answer: C; requires advanced judgment about CI/CD, SDKs, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	CI/CD advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T07-018	T07	Objective Question	4	A production issue is attributed to project structure, although integration, release and rollback requirements, an early demonstration of testing succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor	Correct answer: A; requires advanced judgment about project structure, authentication, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	project structure advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T07-019	T07	Objective Question	4	The steering committee asks whether REST APIs is ready to support 'Demonstrate maintainable code, secure automation and environment-aware deployment'. Which proof carries the most weight? A) Obtain an independent design review with requirement traceability, operational readiness checks, and clear ownership for	Correct answer: B; requires advanced judgment about REST APIs, BI connectivity, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	REST APIs advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T07-020	T07	Objective Question	5	A production issue is attributed to project structure, although integration, release and rollback requirements, an early demonstration of testing succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor	Correct answer: D; requires advanced judgment about SDKs, operational integrations, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	SDKs advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T07-021	T07	Objective Question	4	A new requirement invalidates an assumption behind authentication midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependency requires immediate redesign. B) Keep the original design for the current	Correct answer: D; requires advanced judgment about authentication, Declarative Automation Bundles, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	authentication advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T07-022	T07	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on BI connectivity? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which integration points carry the greatest uncertainty,	Correct answer: A; requires advanced judgment about BI connectivity, GitHub Actions, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	BI connectivity advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T07-023	T07	Objective Question	5	After a successful pilot, the energy company must operationalize integration. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assumes primary support responsibility. B) Transfer ownership as a go-live using acceptance	Correct answer: C; requires advanced judgment about operational integration, environment promotion, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	operational integrations advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T07-024	T07	Objective Question	4	An assessor challenges your recommendation because a crucial fact about Declarative Automation Bundles remains uncertain. Which answer is strongest? A) Pause the decision until the uncertainty is fully resolved, then return with one firm recommendation and no conditional alternatives. B) State the	Correct answer: D; requires advanced judgment about Declarative Automation Bundles, VS Code, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Declarative Automation Bundles advanced decision — T07	Use Refactor and test a project, automate an API task, connect a BI or operational system and deploy across dev, test and production to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T08-001	T08	Experience Probe	4	Choose one substantial legacy-to-latehouse migration you have worked on. Explain the original constraints, the hardest technical problem, the decision you made and the measurable outcome.	What alternatives did you reject? What broke during migration? What would you change now?	Specific first-hand evidence, trade-offs, incident detail and measurable result.	Generic team story/cannot explain own decision or concrete failure.	Migration overview	Migration case study coaching + architecture review	4	Active	1	Migration	Intermediate	Live assessor	Yes
RSA-T08-002	T08	Incident	5	A production data pipeline intermittently misses its SLA, but infrastructure monitoring shows no obvious outage. Describe how you would isolate the fault across data, code, compute and downstream dependencies.	What evidence do you collect first? How do you reproduce intermittent behavior? How do you prevent recurrence?	Structured hypothesis/evidence/isolation process, dependency awareness and preventive controls.	Random tuning/blames platform without evidence.	Production troubleshooting	Incident simulation + RCA writing	5	Active	1	Troubleshooting & Operations	Advanced	Live assessor	Yes
RSA-T08-003	T08	Experience Probe	4	Describe a migration where source and target data models differed substantially. How did you validate that business meaning survived the migration?	What reconciliation was performed? How were edge cases found? Who signed off?	First-hand reconciliation, semantic mapping, tests and business validation.	Only says row counts matched.	Migration validation	Migration reconciliation lab	5	Active	1.1	Migration	Intermediate	Live assessor	Yes
RSA-T08-004	T08	Scenario	5	A legacy ETL estate contains hundreds of tightly-coupled jobs with undocumented dependencies. Plan the migration without creating a big-bang failure.	How do you discover dependencies? How do you sequence waves? How do you run parallel validation?	Inventory/dependency graph, migration waves, dual-run/reconciliation, rollback and observability.	Rewrites everything at once.	Migration planning	Migration wave-planning workshop	6	Active	1.1	Migration	Advanced	Either	Yes
RSA-T08-005	T08	Incident	5	A job succeeds technically but downstream reports contain stale data. Build an investigation that spans orchestration, data freshness and consumer dependencies.	What freshness markers exist? Could upstream have succeeded with stale data?	End-to-end data/SLA reasoning, freshness checks, dependencies and monitoring.	Equates job success with data correctness.	Data freshness incident	Freshness/SLA monitoring lab	5	Active	1.1	Troubleshooting & Operations	Advanced	Live assessor	Yes
RSA-T08-006	T08	Incident	4	A pipeline fails only on month-end volumes. Explain how you would reproduce and isolate the scale-dependent failure.	What changes at month end? How do you create representative test data?	Volume/data-shape hypothesis, representative testing, metrics and capacity/algorithm diagnostics.	Treats intermittent failure as a random.	Scale troubleshooting	Peak-volume incident simulation	5	Active	1.1	Troubleshooting & Operations	Intermediate	Live assessor	Yes
RSA-T08-007	T08	Scenario	4	A production fix is urgently needed, but the root cause is uncertain. Explain how you balance restoration, evidence preservation and permanent remediation.	What is the safest mitigation? What evidence must be captured? How do you prevent recurrence?	Incident discipline, containment/reserve, preserve evidence, RCA, corrective/preventive actions.	Makes irreversible changes without evidence.	Incident management	RCA/incident-response lab	4	Active	1.1	Troubleshooting & Operations	Intermediate	Either	Yes
RSA-T08-008	T08	Experience Probe	4	Tell us about a technical decision you personally made that later proved wrong. How did you detect it and what did you change?	What evidence changed your mind? What was the impact?	Specific ownership, learning, evidence and corrective action.	Claims never made a wrong decision, vague team story.	Engineering judgment	Technical retrospective coaching	4	Active	1.1	Migration	Intermediate	Live assessor	Yes
RSA-T08-009	T08	Scenario	5	Users report intermittent query slowness while platform health is green. Design a troubleshooting tree that distinguishes data layout, concurrency, compute and query-plan causes.	What evidence separates each branch? How do you avoid random tuning?	Structured isolation across workload concurrency, compute, plan, data layout and metrics.	Blames platform outage without evidence.	Query troubleshooting	Performance troubleshooting simulation	5	Active	1.1	Troubleshooting & Operations	Advanced	Either	Yes
RSA-T08-010	T08	Scenario	4	A migration must preserve historical data while enabling a new incremental ingestion model. Explain how you would cut over without gaps or duplicates.	How is the historical boundary defined? How are late incremental ingestion model. Explain how you would cut over without gaps or duplicates.	Backfill + incremental boundary, reconciliation, idempotence and counter controls.	Runs backfill and streaming independently with no boundary.	Migration cutter	Backfill/cutover lab	5	Active	1.1	Migration	Intermediate	Either	Yes
RSA-T08-011	T08	Objective Question	4	A public-sector agency must make a high-impact decision about Current/target architecture while customer creates a competing constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B)	Correct answer: C; requires advanced judgment about Current/target architecture, customer, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Current/target architecture advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T08-012	T08	Objective Question	5	During Changing requirements, migration risk and production incident cases, an early demonstration of migration strategy succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor production	Correct answer: C; requires advanced judgment about migration strategy, observability, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	migration strategy advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T08-013	T08	Objective Question	4	Two technically credible designs use workload migration differently. One optimizes short-term delivery, the other improves troubleshooting but adds complexity. How should the RSA decide? A) Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Correct answer: A; requires advanced judgment about workload migration, troubleshooting, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	workload migration advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T08-014	T08	Objective Question	4	A production issue is attributed to customer, although telemetry also suggests for disaster recovery. Which investigation sequence is strongest? A) Tune the named component while holding other factors steady, then use incident telemetry to confirm whether the adjustment removed the cause. B) Roll back the most recent	Correct answer: C; requires advanced judgment about customer, disaster recovery, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	customer advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T08-015	T08	Objective Question	5	The steering committee asks whether observability is ready to support 'Detect and isolate architectural, migrational, incident responses, evidence and decision consequences. Which proof carries the most weight? A) Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational	Correct answer: A; requires advanced judgment about observability, incident responses, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	observability advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T08-016	T08	Objective Question	4	Security prioritizes production readiness, engineering prioritizes troubleshooting, and operations raises concerns about Current/target architecture. What should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and preferred compromise in	Correct answer: D; requires advanced judgment about troubleshooting, production readiness, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	troubleshooting advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes

RSA-T08-017	T08	Objective Question	4	A new requirement invalidates an assumption behind disaster recovery midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependency requires immediate redesign. B) Keep the original design to the	Correct answer: D; requires advanced judgment about disaster recovery, platform operating model, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	disaster recovery advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T08-018	T08	Objective Question	5	Which design-review question most effectively exposes a hidden weakness in an approach centered on incident response? A) Which integration points carry the greatest uncertainty, and how have comparable teams reduced similar implementation and operating risks? B) Could the design meet current requirements with fewer	Correct answer: C; requires advanced judgment about incident response, architecture trade-offs, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Incident response advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T08-019	T08	Objective Question	4	After a successful pilot, the public-sector agency must operationalize production readiness. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assume primary support responsibility. B) Transfer ownership at go-live	Correct answer: A; requires advanced judgment about platform operating model, migration strategy, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	production readiness advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T08-020	T08	Objective Question	4	An assessor challenges your recommendation because a crucial fact about platform operating model remains uncertain. Which answer is strongest? A) Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails. B) Reuse the decision until the	Correct answer: A; requires advanced judgment about platform operating model, migration strategy, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	platform operating model advanced decision — T08	Use Whiteboard a target architecture, migration plan, culture, observability and production operating model to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T09-001	T09	Concept	4	What is AI/BI Genie, and where can't it create real business value for an enterprise? Give one practical use case.	What user problem does it solve? What data and semantic preparation are required? Where should a human remain in the loop?	Explain natural-language analytics over governed enterprise data; gives a credible use case such as sales, operations or finance exploration; includes domain curators, permissions and escalation for high-impact decisions.	Calls a general-purpose chatbot with unrestricted data access; gives no concrete workflow; assumes no preparation is required.	AI/BI Genie value proposition	Design a domain-specific Genie use case with measurable business outcomes	4	Active	1.2	AI/BI & Genie	Intermediate	Ether	Yes
RSA-T09-002	T09	Customer Simulation	4	A business leader says, "If Genie can answer questions directly from our data, why do we still need BI developers or data teams? How would you respond?"	Which tasks become faster? Which responsibilities remain essential? How might team roles evolve?	What does Genie expose self-service while data teams still design trusted data products, semantics, permissions, quality, performance and complex analytics; frames role evolution rather than replacement.	Claims Genie replaces all BI and data roles; defends existing roles without acknowledging productivity gains; ignores governance and semantic design.	AI-assisted BI operating model	Business-architect objection role-play on AI-assisted analytics	4	Active	1.2	AI/BI & Genie	Intermediate	Live assessor	Yes
RSA-T09-003	T09	Concept	4	What is Genie One, and how is its experience different for a business user compared with a traditional Dataworks workspace experience?	Which capabilities are exposed to the business user? How is content curated? What permissions still govern the experience?	Describe a focused conversational analytics interface for discovering and querying approved Genie spaces without requiring the broader engineering workspace experience; retains governed identity and data access.	Confuses Genie One with a new foundation model; says it bypasses workspace permissions, cannot explain the business-user experience.	Genie One user experience journey	Compare business user and workspace-user compare with access controls	3	Active	1.2	AI/BI & Genie	Intermediate	Ether	Yes
RSA-T09-004	T09	Architecture Case	5	How would you ensure that an AI/BI or Genie implementation gives trusted answers rather than simply producing convincing-looking answers?	How do semantic definitions and instructions govern what's returned? How do you build? How are permissions and feedbacks handled?	Uses curated data, metric definitions, metadata, examples and instructions; validates tags with representative questions and expected SQL/results; monitors feedback, permissions, freshness and failure modes with clear confidence boundaries.	Relies only on the language model; evaluates answers by fluency; exposes use ambiguities in tables; has no regression testing or ownership.	Trusted conversational analytics	Create a Genie trust framework with golden questions and governance controls	5	Active	1.2	AI/BI & Genie	Advanced	Live assessor	Yes
RSA-T09-005	T09	Deep Dive	4	What are Genie Agents, and when would you use multiple domain-specific agents rather than one broad enterprise analytics agent?	How are agents selected or orchestrated? How do domain boundaries impact quality? What failure modes emerge across agents?	Explains domain-focused agents grounded in curated domain spaces and good data; uses the causal coding, domain ownership, overlapping definitions, access boundaries and evaluation across agent responses.	Assumes one broad agent always performs best; ignores semantic and permission requirements; cannot explain routing or conflicting decisions.	Genie Agents architecture	Design domain agents, routing rules and cross-domain evaluation cases	4	Active	1.2	AI/BI & Genie	Intermediate	Ether	Yes
RSA-T09-006	T09	Deep Dive	4	How do Unity Catalog metric views support consistent analytics across dashboards, SQL, and Genie, and what design mistakes can make a metric view unavailable?	How are dimensions and measures governed? How do time grain and filters affect results? How do you manage operator logic?	Explains governed reusable metrics and dimensions with consistent semantics across tools; covers grain, joins, filters, ownership, versioning, performance and validation against source logic.	Treats a metric as a renamed SQL expression; ignores grain and join on-out, changes definitions with no versioning or stakeholder alignment.	Semantic metrics and metric views	Model and test reusable Unity Catalog metric views	4	Active	1.2	Semantic Layer & Analytics	Intermediate	Ether	Yes
RSA-T09-007	T09	Customer Simulation	4	A client asks whether to build an AI/BI dashboard, a Genie space or both for an executive reporting use case. How would you guide the decision?	Which questions are recurring versus exploratory? What control over layout and narrative is required? How would you move between experiences?	Uses dashboards for curated recurring KPIs and narrative. Genie for governed exploration and follow-up questions, and a combined experience when both are needed; considers audience, trust and support model.	Says conversational analytics makes dashboards obsolete; uses a dashboard for every ad hoc question; ignores executive consumption needs.	AI/BI experience design	Executive analytics journey design using dashboards and Genie	4	Active	1.2	AI/BI & Genie	Intermediate	Live assessor	Yes
RSA-T09-008	T09	Objective Question	5	A multinational retailer must make a high-impact decision about AI/BI Dashboards while Genie creates a competing constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B) Define the	Correct answer: B; requires advanced judgment about AI/BI Dashboards, Genie, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and address the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	AI/BI Dashboards advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T09-009	T09	Objective Question	4	During Conflicting KPI definitions and business user natural-language analytics case, an early demonstration of semantic models succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor production	Correct answer: D; requires advanced judgment about semantic models, Genie One, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	semantic models advanced decision T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T09-010	T09	Objective Question	4	The technically creditible design uses metrics differently. One optimizes short-term delivery, the other improves natural-language analytics but adds complexity. How should the RSA decide? A) Choose the faster design if it is reusable, then schedule a formal checkpoint after early usage data becomes available. B) Choose the	Correct answer: C; requires advanced judgment about metrics, natural-language analytics, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reusability; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	metrics advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T09-011	T09	Objective Question	5	A production issue is attributed to Genie, although telemetry also suggests for governed self-service analytics. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first. B) Tune the	Correct answer: A; requires advanced judgment about Genie, governed self-service analytics, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Genie advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T09-012	T09	Objective Question	4	The steering committee asks whether Genie One is ready to support "Demotestatic accounts, governed self-service analytics and business value. Which proof carries the most weight? A) Obtain an independent design review with requirement traceability, operational readiness checks, and clear ownership for unresolved	Correct answer: B; requires advanced judgment about Genie One, business use cases, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Genie One advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T09-013	T09	Objective Question	4	Security prioritizes AI/BI Dashboards, engineering prioritizes natural-language analytics, and operations raises concerns about Genie. What should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and preferred compromises in writing. B) Implement the controls aligned	Correct answer: C; requires advanced judgment about natural-language analytics, AI/BI Dashboards, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	natural language analytics advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T09-014	T09	Objective Question	5	A new requirement invalidates an assumption behind governed self-service analytics midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependency requires immediate redesign. B) Keep the original	Correct answer: D; requires advanced judgment about governed self-service analytics, semantic models, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	governed self-service analytics advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T09-015	T09	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on business use cases? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which integration points carry the greatest uncertainty.	Correct answer: A; requires advanced judgment about business use cases, metrics, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	business use cases advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T09-016	T09	Objective Question	4	After a successful pilot, the multinational retailer must operationalize AI/BI Dashboards. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assume primary support responsibility. B) Assign accountable ownership	Correct answer: B; requires advanced judgment about AI/BI Dashboards, Genie, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	AI/BI Dashboards advanced decision — T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T09-017	T09	Objective Question	5	An assessor challenges your recommendation because a crucial fact about semantic models remains uncertain. Which answer is strongest? A) Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails. B) Reuse the decision until the	Correct answer: A; requires advanced judgment about semantic models, Genie One, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	semantic models advanced decision T09	Use Build governed metrics and an AI/BI dashboard, then configure and test a Genie experience to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T10-001	T10	Architecture Case	5	A client wants to build enterprise AI Agents that can use governed data, business metrics and operational tools. Sketch the Dataworks architecture and the controls you would require before production.	How are retrieval, tools and model endpoints governed? How do agents inherit user permissions? How are evaluation and monitoring integrated?	Covers governed data and metrics, retrieval or AI Search, model serving, tool access, identity propagation, evaluation, tracing, monitoring and human approval for sensitive actions?	Focuses only on prompt engineering; gives agents unrestricted service credentials; has no evaluation, tracing or action controls.	Enterprise agent architecture	Build AI Agents architecture and production-readiness checklist	5	Active	1.2	GenAI & Agent Operations	Advanced	Live assessor	Yes
RSA-T10-002	T10	Deep Dive	4	How do chunking and embeddings affect retrieval? How are metadata synchronized? How do filters and access controls apply?	How do chunking and embeddings affect retrieval? How are metadata synchronized? How do filters and access controls apply?	Explains source preparation, chunking, embedding and hybrid or filtered retrieval; covers index definitions, metadata filters, permissions, relevance evaluation and grounding of generated responses.	Treats retrieval as keyword search only; ignores document updates and permissions; evaluates only first prose rather than retrieved context.	AI Search and retrieval architecture	Build and evaluate a permission-aware retrieval pipeline	4	Active	1.2	GenAI & Agent Operations	Intermediate	Ether	Yes
RSA-T10-003	T10	Incident	5	An enterprise AI agent passed a demo but performs inconsistently in production. How would you use MFlow 3 capabilities to diagnose quality, latency and cost regressions?	What traces and evaluation datasets do you inspect? How do you compare versions? What production feedback becomes a test case?	Uses tracing, versioned experiments, evaluation datasets, judges or metrics, production monitoring and feedback loops; separates retrieval, model, tool and latency failures and converts incidents into regression tests.	Returns prompts randomly; evaluates only one demo question; cannot separate retrieval, model and tool failures; ignores cost and latency.	MFlow 3 agent operations	Agent tracing, evaluation and production-regression incident lab	5	Active	1.2	GenAI & Agent Operations	Advanced	Live assessor	Yes
RSA-T10-004	T10	Objective Question	4	A pharmaceutical enterprise must make a high-impact decision about Mosaic AI while RAG creates a competing constraint. Which response is most defensible? A) Select the most comprehensive option, add governance checkpoints, and retest cost or operating concerns as implementation evidence becomes available. B) Allow	Correct answer: C; requires advanced judgment about Mosaic AI, RAG, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Mosaic AI advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T10-005	T10	Objective Question	4	During Production GenAI or agent system with quality, safety and operational issues, an early demonstration of MFlow shows that, but only under ideal conditions. What evidence is required before scaling? A) Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting	Correct answer: A; requires advanced judgment about MFlow, Vector Search, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	MFlow advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes

RSA-T10-006	T10	Objective Question	5	Two technically credible designs use foundation models differently. One optimizes short term delivery, the other improves Model Serving but adds complexity. How should the RSA decide? A) Combine the strongest elements of both designs and accept temporary duplication until operating evidence clarifies the preferred long-term design.	Correct answer: B; requires advanced judgment about foundation models, Model Serving, evidence and decision consequences.	Score both designs against outcomes, risk, cost, operability, and reusability; document assumptions and identify evidence that would change the recommendation and the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	foundation models advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T10-007	T10	Objective Question	4	A production issue is attributed to RAG, although telemetry also changed for evaluation. Which investigation sequence is strongest? A) Increase capacity, compare before and after metrics, and test improved performance as evidence that resource pressure caused the incident. B) Triage the named components while holding other components constant.	Correct answer: C; requires advanced judgment about RAG, evaluation, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	RAG advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T10-008	T10	Objective Question	4	The steering committee asks whether Vector Search is ready to support Defined the AI architecture and demonstrate evaluation, governance and production readiness? Which proof carries the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. B) Engineer proof of concept for Model Serving, and operations raises concerns about MoSaaS AI. What should happen next? C) Translate concerns into decision criteria, separate mandatory constraints from preferences, compare constraint alternatives, and time-box evidence gathering for unresolved risks.	Correct answer: C; requires advanced judgment about Vector Search, agents, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Vector Search advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T10-009	T10	Objective Question	5	A new requirement invalidates an assumption behind evaluation midway through delivery. Which action demonstrates senior judgment? A) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. B) Create a follow-on backlog item, but Which design review question most effectively exposes a hidden weakness in an approach centered on agents? A) Which assumptions have the weakest support, and what new evidence would be sufficient to change the recommended design or sequencing? B) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and what outcome would be affected?	Correct answer: A; requires advanced judgment about Model Serving, Agent Framework, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare constraint alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Model Serving advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T10-010	T10	Objective Question	4	Which design review question most effectively exposes a hidden weakness in an approach centered on agents? A) Which assumptions have the weakest support, and what new evidence would be sufficient to change the recommended design or sequencing? B) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and what outcome would be affected?	Correct answer: C; requires advanced judgment about outcomes, dependencies, evaluation, governance, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	evaluation advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T10-011	T10	Objective Question	4	Which design review question most effectively exposes a hidden weakness in an approach centered on agents? A) Which assumptions have the weakest support, and what new evidence would be sufficient to change the recommended design or sequencing? B) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and what outcome would be affected?	Correct answer: B; requires advanced judgment about agents, production AI, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and what outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	agents advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-T10-012	T10	Objective Question	5	After a successful pilot, the pharmaceutical enterprise must operationalize Agent Framework. Which operating model is strongest? A) Automate deployment and monitoring, with the product team owning exceptions until service levels remain stable for an agreed period. B) Retain the pilot team through a defined fact about current state remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Acknowledge the uncertainty, explain its delivery plan in place. B) Acknowledge the uncertainty, explain its delivery plan in place.	Correct answer: C; requires advanced judgment about Agent Framework, MoSaaS AI, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Agent Framework advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Advanced	Online assessment	Yes
RSA-T10-013	T10	Objective Question	4	An assessor challenges your recommendation because a crucial fact about current state remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Acknowledge the uncertainty, explain its delivery plan in place. B) Acknowledge the uncertainty, explain its delivery plan in place.	Correct answer: B; requires advanced judgment about outcomes, dependencies, evaluation, governance, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible risk, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	governance advanced decision — T10	Use Build a governed RAG or agent workflow with serving, tracing and evaluation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Technical Judgment	Intermediate	Online assessment	Yes
RSA-C01-001	C01	Customer Simulation	5	A customer wants real-time analytics, maximum isolation, minimal cost and zero operational complexity simultaneously. Lead the first five minutes of the conversation.	Correct answer: C; requires advanced judgment about what the requirements conflict? What do you prioritize first?	Recognizes conflicts, discovers priorities/SLA, reformulates choices and avoids premature design.	Promises all requirements simultaneously.	Requirements discovery	Discovery/trade-off simulation	5	Active	1.1	Customer Solutioning	Advanced	Live assessor	Yes
RSA-C01-002	C01	Discovery	5	A client gives you a vague requirement: "We want to modernize our data platform." What would you ask before proposing an architecture?	Which business outcomes and pain points matter? What workloads, users and SLAs exist? What constraints and success measures must be met?	Runs structured discovery across business outcomes, current-state architecture, data domains, workloads, users, security, regulation, skills, cost, timelines and success criteria; avoids premature solutioning.	Immediately proposes a reference architecture; asks only technical inventory questions; does not clarify value, priorities or constraints.	Requirements discovery	Conduct a modernization discovery workshop and produce a problem statement	5	Active	1.2	Consulting & Client Skills	Advanced	Live assessor	Yes
RSA-C01-003	C01	Scenario	5	You discover that the client's stated requirement is not actually solving their underlying business problem. What would you do?	How do you test your understanding? How do you challenge the requirement respectfully? What if the client still chooses the original request?	Validates the underlying problem with stakeholders and evidence, explains the mismatch and consequences, offers alternative options and decision criteria, documents the decision and respects client ownership while managing risk.	Builds the requested solution without challenge; tells the client they are wrong without discussing changes scope unsuitably.	Problem reframing and consultative challenge	Root-cause discovery and requirement-reframing role-play	5	Active	1.2	Consulting & Client Skills	Advanced	Live assessor	Yes
RSA-C01-004	C01	Discovery	4	Imagine you are joining your first meeting with a new DataAnalytics client. What are the three most important things you want to understand before recommending anything?	Why did you choose those three? What would you ask next? Who must be represented in the discussion?	Prioritizes the business outcome or problem, the current-state environment and constraints, and the stakeholders or measures of success; demonstrates structured listening and avoids leading with a predetermined solution.	Starts with product edition or cluster sizing; asks only what the client wants to buy; cannot explain how the answers affect recommendations.	First-meeting discovery	Practice an opening discovery agenda and stakeholder map	3	Active	1.2	Consulting & Client Skills	Intermediate	Live assessor	Yes
RSA-C01-005	C01	Objective Question	4	A regional airline must make a high-impact decision about Consulting mindset while issue trees creates a competing constraint. Which response is most defensible? A) Select the most comprehensive option, add governance checkpoints, and resolve cost or operating concerns as implementation evidence becomes available.	Correct answer: D; requires advanced judgment about Consulting mindset, issues trees, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Consulting mindset advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C01-006	C01	Objective Question	5	During Client reports Toolchain is slow to deliver. Head of Data discovery role-play, an early demonstration of symptoms vs root causes succeeds, but only under ideal conditions. What evidence is required before scaling? A) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable.	Correct answer: C; requires advanced judgment about hypotheses, business impact, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	symptoms vs root causes advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C01-007	C01	Objective Question	4	Two technically credible designs use hypotheses differently. One optimizes short-term delivery, the other improves business impact but adds complexity. How should the RSA decide? A) Combine the strongest elements of both designs and accept temporary duplication until operating evidence clarifies the preferred long-term design.	Correct answer: C; requires advanced judgment about hypotheses, business impact, evidence and decision consequences.	Score both designs against outcomes, risk, cost, operability, and reusability; document assumptions and identify evidence that would change the recommendation and the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	hypotheses advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C01-008	C01	Objective Question	4	A production issue is attributed to issue trees, although telemetry also changed for evaluation. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first. B) Increase capacity, compare before and after metrics, and test improved performance as evidence that resource pressure caused the incident. B) Triage the named components while holding other components constant.	Correct answer: A; requires advanced judgment about issue trees, questioning, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	issue trees advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C01-009	C01	Objective Question	5	The steering committee asks whether MECE-style structuring is ready to support "Clear problem statement, diagnostic plan, structured discovery notes and requirement map." Which proof carries the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and security priorities. B) Engineer proof of concept for Model Serving, and operations raises concerns about success measures. What should happen next? C) Narrow the first release to undisputed requirements and defer conflicting capabilities to a separate validation sprint with named owners. B. Ask the sponsor to separate validation sprint with named owners. B. Ask the sponsor to separate validation sprint with named owners.	Correct answer: C; requires advanced judgment about MECE-style structuring, listening, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	MECE-style structuring advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C01-010	C01	Objective Question	4	Security prioritizes stakeholder goals, engineering prioritizes business impact, and operations raises concerns about success measures. What should happen next? A) Narrow the first release to undisputed requirements and defer conflicting capabilities to a separate validation sprint with named owners. B. Ask the sponsor to separate validation sprint with named owners. B. Ask the sponsor to separate validation sprint with named owners.	Correct answer: C; requires advanced judgment about business impact, stakeholder goals, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare constraint alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	business impact advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C01-011	C01	Objective Question	4	A new requirement invalidates an assumption behind questioning midway through delivery. Which action demonstrates senior judgment? A) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. B) Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Correct answer: B; requires advanced judgment about questioning, current state, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	questioning advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C01-012	C01	Objective Question	5	Which design review question most effectively exposes a hidden weakness in an approach centered on listening? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Correct answer: A; requires advanced judgment about listening, constraints, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	listening advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C01-013	C01	Objective Question	4	After a successful pilot, the regional airline must operationalize stakeholder goals. Which operating model is strongest? A) Automate deployment and monitoring, with the product team owning exceptions until service levels remain stable for an agreed period. B) Retain the pilot team through a defined fact about current state remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Pause the decision until the uncertainty is resolved.	Correct answer: B; requires advanced judgment about stakeholder goals, success measures, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	stakeholder goals advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C01-014	C01	Objective Question	4	An assessor challenges your recommendation because a crucial fact about current state remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Pause the decision until the uncertainty is resolved.	Correct answer: D; requires advanced judgment about current state, non-functional requirements, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible risk, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	current state advanced decision — C01	Use Structure an ambiguous client problem, then prepare and conduct a discovery interview to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C02-001	C02	Customer Simulation	5	A CPO challenges a promised 25% platform cost reduction. Explain how you would respond before committing to a number.	What baseline is available? Which costs are comparable? How would you validate savings?	Requests baseline/workload data, separates assumptions, proposes measurable pilot/metric.	Guarantees savings without evidence.	Commercial technical judgment	FinOps customer simulation	5	Active	1.1	Customer Solutioning	Advanced	Live assessor	Yes
RSA-C02-002	C02	Customer Simulation	4	A client wants the technically most advanced DataAnalytics architecture, but their team has limited skills to operate it. What would you recommend and why?	How do you assess operational readiness? Which capabilities should be phased? How would you build client capability over time?	Recommends the simplest architecture that meets current outcomes, uses managed capabilities where appropriate, limits unnecessary complexity and creates a phased roadmap for skills, governance and operational maturity.	Builds the most complex design to demonstrate expertise; ignores adoption and supportability; recommends a permanently limited design with no evolution path.	Pragmatic architecture and operability	Architecture simplification and capability-maturity planning exercise	4	Active	1.2	Consulting & Client Skills	Intermediate	Live assessor	Yes
RSA-C02-003	C02	Customer Simulation	5	A client asks you to choose between faster delivery, lower cost and a more available architecture. How would you help them make that decision?	Which constraints are fixed versus flexible? How would you quantify the trade-offs? Can the decision be phased or reversible?	Frames the options against business priority, risk, time, scope and measurable criteria; quantifies trade-offs where possible; identifies minimum non-negotiables and proposes phased, reversible decisions rather than pretending all goals can be maximized.	Selects a priority based on personal preference; promises all three without compromise; discusses technology without business impact or decision criteria.	Trade-off facilitation	Facilitate a time-cost-scale decision matrix with stakeholders	5	Active	1.2	Consulting & Client Skills	Advanced	Live assessor	Yes
RSA-C02-004	C02	Objective Question	5	A consumer goods group must make a high-impact decision about Options while cost creates a competing constraint. Which response is most defensible? A) Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment. B)	Correct answer: A; requires advanced judgment about Options, cost, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Options advanced decision — C02	Use Create an option matrix and build a slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes

RSA-C02-005	C02	Objective Question	4	During Architecture choice with conflicting priorities followed by a steering committee presentation, an early demonstration of evolution criteria succeeds, but only under ideal conditions. What evidence is required before scaling? A) Complete an operational readiness review and failure walkthrough, but defer representative	Correct answer: C; requires advanced judgment about evaluation criteria, complexity, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	evaluation criteria advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C02-006	C02	Objective Question	4	Two technically credible designs use risk differently. One optimizes short-term delivery; the other improves scalability but adds complexity. How should the RSA decide? A) Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the	Correct answer: A; requires advanced judgment about risk, scalability, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	risk advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C02-007	C02	Objective Question	5	A production issue is attributed to cost, although telemetry also changed for security. Which investigation sequence is strongest? A) Roll back the most recent change, monitor the symptom, and investigate other variables only if the issue continues afterward. B) Increase capacity, compare before and after metrics, and treat	Correct answer: C; requires advanced judgment about cost, security, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	cost advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C02-008	C02	Objective Question	4	The steering committee asks whether complexity is really to support "complexification" with explicit trade-offs, supporting evidence and a clear decision ask. Which proof carries the most weight? A) Secure stakeholder approval using a detailed delivery plan, defined methodology, and escalation commitments for risks not yet tested	Correct answer: D; requires advanced judgment about complexity, operating model, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	complexity advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C02-009	C02	Objective Question	4	Security prioritizes situation-complication-questions, engineering prioritizes scalability, and operations raises concerns about recommendation. What should happen next? A) Implement the controls shared by all teams, then revisit optional requirements after initial release metrics show the operational impact. B) Narrow	Correct answer: D; requires advanced judgment about security, executive summary, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	scalability advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C02-010	C02	Objective Question	5	A new requirement invalidates an assumption behind security midway through delivery. Which action demonstrates senior judgment? A) Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path. B) Keep the original	Correct answer: A; requires advanced judgment about situation-complication-questions, recommendation, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	security advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C02-011	C02	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on operating model? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Could the design meet current requirements with fewer	Correct answer: A; requires advanced judgment about operating model, evidence, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	operating model advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C02-012	C02	Objective Question	4	After a successful pilot, the consumer goods group must situation-complication-questions. Which operating model is strongest? A) Transfer ownership at go-live using acceptance criteria, formal training, and a time-boxed hypercare period led jointly by delivery and operations. B) Assign accountable	Correct answer: B; requires advanced judgment about situation-complication-questions, recommendation, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	situation-complication-questions advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C02-013	C02	Objective Question	5	An assessor challenges your recommendation because a crucial factor about evidence remains uncertain. Which answer is strongest? A) Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails. B) State the recommendation and	Correct answer: A; requires advanced judgment about executive summary, roadmap, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	executive summary advanced decision — C02	Use Create an option matrix and build a 5-slide recommendation to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C03-001	C03	Customer Simulation	4	A customer insists on a design choice you believe will create operational problems. Demonstrate how you would challenge the decision without becoming adversarial	What evidence do you present? What alternatives do you offer?	Respectful challenge, clarifies goals, explains consequences, offers options and documents decision.	Simply agrees or becomes combative.	Consultative influence	Stakeholder challenge role-play	4	Active	1.1	Customer Solutioning	Intermediate	Live assessor	Yes
RSA-C03-002	C03	Customer Simulation	4	A senior stakeholder challenges your proposed architecture in a meeting. How would you defend your recommendation without becoming defensive?	How do you clarify the concern? What evidence and what do you present? When would you change the recommendation?	Listens and clarifies the objection, restates goals, uses evidence and explicit trade-offs, acknowledges uncertainty, invites alternatives and defines validation steps; remains willing to revise based on new facts.	Appeals to authority or certification; becomes argumentative; agrees immediately without examining the concern; hides assumptions.	Executive challenge and composure	Stakeholder challenge role-play with evidence, trade-offs and decision criteria	4	Active	1.2	Consulting & Client Skills	Intermediate	Live assessor	Yes
RSA-C03-003	C03	Objective Question	4	A government department must make a high-impact decision about Clarify objection while evidence creates a competing constraint. Which response is most defensible? A) Select the most comprehensive option, add governance checkpoints, and resolve cost or operating concerns as implementation evidence becomes	Correct answer: D; requires advanced judgment about Clarify objection, evidence, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Clarify objection advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C03-004	C03	Objective Question	4	During Client report prepared architecture, an early demonstration of knowledge succeeds, but only under ideal conditions. What evidence is required before scaling? A) Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving	Correct answer: A; requires advanced judgment about acknowledge, disagree without friction, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment. RSA-C03-005	C03	Objective Question	5	Two technically credible designs use test assumptions differently. One optimizes short-term delivery; the other improves escalation but adds complexity. How should the RSA decide? A) Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the	Correct answer: A; requires advanced judgment about test assumptions, escalation, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	test assumptions advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C03-006	C03	Objective Question	4	A production issue is attributed to evidence, although telemetry also changed for security. Which investigation sequence is strongest? A) Increase capacity, compare before and after metrics, and treat improved performance as evidence that resource pressure caused the incident. B) Tune the named component while holding	Correct answer: D; requires advanced judgment about evidence, Clarify objection, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	evidence advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C03-007	C03	Objective Question	4	The steering committee asks whether disagree without friction is really to support "disagreement" while defining evidence and the recommendation. Which proof carries the most weight? A) Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational	Correct answer: A; requires advanced judgment about disagree without friction, acknowledge, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	disagree without friction advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C03-008	C03	Objective Question	5	Security prioritizes test assumptions, engineering prioritizes escalation, and operations raises concerns about escalation. What should happen next? A) Narrow the first release to undisputed requirements and offer conflicting capabilities to a separate validation sprint with named owners. B) Ask the sponsor to decide	Correct answer: D; requires advanced judgment about escalation, test assumptions, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	escalation advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C03-009	C03	Objective Question	4	A new requirement invalidates an assumption behind Clarify objection midway through delivery. Which action demonstrates senior judgment? A) Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path. B)	Correct answer: A; requires advanced judgment about Clarify objection, evidence, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Clarify objection advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C03-010	C03	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on acknowledge? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which assumptions have the weakest support, and	Correct answer: A; requires advanced judgment about acknowledge, disagree without friction, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	acknowledge advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C03-011	C03	Objective Question	5	After a successful pilot, the government department must operationalizes test assumptions. Which operating model is strongest? A) Automate deployment and monitoring with the product team owning exceptions until service levels remain stable for an aged period. B) Retain the pilot team through a defined	Correct answer: A; requires advanced judgment about test assumptions, escalation, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	test assumptions advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C03-012	C03	Objective Question	4	An assessor challenges your recommendation because a crucial factor about evidence remains uncertain. Which answer is strongest? A) Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails. B) Offer additional expert opinions and technical	Correct answer: A; requires advanced judgment about evidence, Clarify objection, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	evidence advanced decision — C03	Use Objection drills to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C04-001	C04	Communication	4	Over a three-month technical introduction that explains your DataBrix experience, the scale of systems you have owned, and the decisions for which you were personally accountable.	What did you personally own? What scale? What business outcome?	Concise, specific, ownership-oriented explanation connecting technical work to outcomes.	CY recitalizes "we" for everything no scale/outcomes.	Technical communication	Executive technical introduction practice	3	Active	1	Customer Solutioning	Intermediate	Live assessor	Yes
RSA-C04-002	C04	Objective Question	4	A financial-services program must make a high-impact decision about Actions while meeting outcomes creates a competing constraint. Which response is most defensible? A) Select the most comprehensive option, add governance checkpoints, and resolve cost or operating concerns as implementation evidence becomes	Correct answer: C; requires advanced judgment about Actions, meeting outcomes, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Actions advanced decision — C04	Use Produce meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C04-003	C04	Objective Question	5	During Requirements charge mid-engagement, an early demonstration of R&D meeting succeeds, but only under ideal conditions. What evidence is required before scaling? A) Repeat the successful demonstration at higher volume, add monitoring, and proceed if results remain stable across several controlled units. B)	Correct answer: C; requires advanced judgment about R&D thinking, follow-ups, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	R&D thinking advanced decision — C04	Use Produce meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C04-004	C04	Objective Question	4	Two technically credible designs use decision log differently. One optimizes short-term delivery; the other improves long-term awareness but adds complexity. How should the RSA decide? A) Score both designs against outcome, risk, cost, operability, and reversibility. Document assumptions and identify evidence that	Correct answer: A; requires advanced judgment about decision log, scenario, decision awareness, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	decision log advanced decision — C04	Use Produce meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C04-005	C04	Objective Question	4	A production issue is attributed to meeting outcomes, although telemetry also changed for stakeholder evidence. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change	Correct answer: A; requires advanced judgment about meeting outcomes, stakeholder evidence, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safety, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	meeting outcomes advanced decision — C04	Use Produce meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes

RSA-C04-006	C04	Objective Question	5	The steering committee asks whether follow-ups is ready to support 'Clear ownership, risks, decisions and next steps.' Which proof carries the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up actions before requesting approval. B) Demonstrate	Correct answer: B; requires advanced judgment about follow-up. Actions, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	follow-ups advanced decision — C04	Use Product meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C04-007	C04	Objective Question	4	Security prioritizes RAID thinking, engineering prioritizes scope/change awareness, and operations raises concerns about follow-ups. What should happen next? A) Narrow the first release to undisputed requirements and defer conflicting capabilities to a separate validation sprint with named owners. B) Ask the sponsor to	Correct answer: D; requires advanced judgment about scope/change awareness, RAID thinking, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	scope/change awareness advanced decision — C04	Use Product meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C04-008	C04	Objective Question	4	A new requirement invalidates an assumption behind stakeholder cadence midway through delivery. Which action demonstrates senior judgment? A) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. B) Quantify the impact on outcomes,	Correct answer: B; requires advanced judgment about stakeholder cadence, decision log, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	stakeholder cadence advanced decision — C04	Use Product meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C04-009	C04	Objective Question	5	Which design review question most effectively exposes a hidden weakness in an approach centered on Actions? A) What critical condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which assumptions have the weakest support, and	Correct answer: A; requires advanced judgment about Actions, meeting outcomes, evidence and decision consequences.	What critical condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Actions advanced decision — C04	Use Product meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Advanced	Online assessment	Yes
RSA-C04-010	C04	Objective Question	4	After a successful pilot, the executive services program must operationalize RAID thinking. Which operating model is strongest? A) Automate deployment and monitoring, with the product team owning exceptions until service levels remain stable for an agreed period. B) Retain the pilot team through a defined transition period	Correct answer: C; requires advanced judgment about RAID thinking, follow-ups, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	RAID thinking advanced decision — C04	Use Product meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-C04-011	C04	Objective Question	4	An executor challenges your recommendation because a crucial fact about decision log remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Pause the decision until the uncertainty is	Correct answer: C; requires advanced judgment about decision log, scope/change awareness, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	decision log advanced decision — C04	Use Product meeting notes and an action log to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Consulting Judgment	Intermediate	Online assessment	Yes
RSA-P01-001	P01	Customer Simulation	4	A CIO asks for a one-minute explanation of why the proposed lakehouse architecture is less risky than continuing to add point solutions. Respond without using product jargon.	What business risks matter? What evidence would you need before claiming improvement?	Concise outcomes/risk framing, acknowledges trade-offs and avoids jargon.	Feature durable, unsupported certainty.	Executive communication	Executive architecture pitch practice	4	Active	1.1	Customer Solutioning	Intermediate	Live assessor	Yes
RSA-P01-002	P01	Objective Question	5	A executive architecture review must make a high-impact decision about Top-down communication while expenses creates a competing constraint. Which response is most defensible? A) Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk	Correct answer: A; requires advanced judgment about Top-down communication, examples, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Top-down communication advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P01-003	P01	Objective Question	4	During Explain the same solution to an engineer and CIO, followed by a practice change session, an early demonstration of supposing conditions, but only under ideal conditions. What evidence is required before scaling? A) Repeat the successful demonstration at higher volume, and retesting, and proceed if	Correct answer: A; requires advanced judgment about negotiating, avoiding jargon/filter, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	supposing advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P01-004	P01	Objective Question	4	Two technically credible designs use briefly differently. One optimizes short-term delivery, the other improves voice but adds complexity. How should the RSA decide? A) Combine the strongest elements of both designs and accept temporary duplication until operating evidence clarifies the preferred long-term model. B) Score	Correct answer: B; requires advanced judgment about briefly, voice, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	briefly advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P01-005	P01	Objective Question	5	A production issue is attributed to examples, although telemetry also changed for pace. Which investigation sequence is strongest? A) Increase capacity, compare before and after metrics, and test improved performance as evidence that resource pressure caused the incident. B) Tune the named component while holding other	Correct answer: D; requires advanced judgment about examples, pace, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	examples advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P01-006	P01	Objective Question	4	The steering committee asks whether avoiding jargon/filter is ready to support 'Clear audience-appropriate explanation and credits, calm response under challenge.' Which proof carries the most weight? A) Run a representative pilot, complete an architecture review, and document assumptions, limitations, and follow-up	Correct answer: D; requires advanced judgment about avoiding jargon/filter, posture, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	avoiding jargon/filter advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P01-007	P01	Objective Question	4	Security prioritizes compromise, engineering prioritizes voice, and operations raises concerns about preparation. What should happen next? A) Narrow the first release to undisputed requirements and defer conflicting capabilities to a separate validation sprint with named owners. B) Ask the sponsor to decide after each team	Correct answer: C; requires advanced judgment about voice, compromise, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	voice advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P01-008	P01	Objective Question	5	A new requirement invalidates an assumption behind pace midway through delivery. Which action demonstrates senior judgment? A) Implement the change within the team, track its consequences during delivery, and request formal scope approval once evidence is available. B) Create a follow-on backlog item, but first confirm that	Correct answer: D; requires advanced judgment about pace, concise answers, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	pace advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P01-009	P01	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on posture? A) Which assumptions have the weakest support, and what new evidence would be sufficient to change the recommended design or sequencing? B) What credible condition could cause failure, how	Correct answer: B; requires advanced judgment about posture, admitting uncertainty, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	posture advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P01-010	P01	Objective Question	4	After a successful pilot, the executive architecture review must operationalize compromise. Which operating model is strongest? A) Automate deployment and monitoring, with the product team owning exceptions until service levels remain stable for an agreed period. B) Assign accountable ownership, service measures,	Correct answer: B; requires advanced judgment about compromise, preparation, evidence and decision consequences.	Assign accountable ownership, service measures, compromise, preparation, evidence, and decision consequences, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	compromise advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P01-011	P01	Objective Question	5	An executor challenges your recommendation because a crucial fact about central answers remains uncertain. Which answer is strongest? A) Gather additional expert opinions and technical detail before changing the recommendation, while keeping the current delivery plan in place. B) Pause the decision until the uncertainty is	Correct answer: D; requires advanced judgment about concise answers, Top-down communication, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible test, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	concise answers advanced decision — P01	Use 1/35-minute explanations and recorded response practice to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P02-001	P02	Customer Simulation	5	A CISO says the data platform will create another uncontrolled copy of sensitive information. Respond, then ask the questions you need before proposing controls.	What data classes exist? Who needs access? What network/identity constraints apply?	Starts with discovery, addresses governance/security architecture and avoids dismissing concern.	Says platform is secure by default; no discovery.	Security solutioning	CISO objection simulation	5	Active	1.1	Customer Solutioning	Advanced	Live assessor	Yes
RSA-P02-002	P02	Customer Simulation	4	An engineering lead disputes your assessment and says their existing design is already best practice. Show how you would test the claim collaboratively.	What evidence would you request? How would you propose a benchmark?	Evidence-based, non-defensive collaboration and measurable comparison.	Appeals to authority/certification only.	Technical influence	Evidence-based consulting role-play	4	Active	1.1	Customer Solutioning	Intermediate	Live assessor	Yes
RSA-P02-003	P02	Objective Question	4	A conflicted discovery workshop must make a high-impact decision about Listening while probing creates a competing constraint. Which response is most defensible? A) Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Correct answer: A; requires advanced judgment about alliance, stakeholder styles, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Listening advanced decision — P02	Use Listening drills and conflict role-play to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P02-004	P02	Objective Question	4	During Antagonistic stakeholder conversation followed by a client engineer repeatedly challenging the recommendation, an early demonstration of paraphrasing succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then	Correct answer: B; requires advanced judgment about paraphrasing, silence, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	paraphrasing advanced decision — P02	Use Listening drills and conflict role-play to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P02-005	P02	Objective Question	5	The two technically credible designs use open-ended questions differently. One optimizes short-term delivery, the other improves confirmation but adds complexity. How should the RSA decide? A) Choose the faster design if it is reversible, then schedule a formal checkpoint after early usage data becomes available. B) Choose the	Correct answer: D; requires advanced judgment about open/closed questions, confirmation, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	open/closed questions advanced decision — P02	Use Listening drills and conflict role-play to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P02-006	P02	Objective Question	4	A production issue is attributed to probing, although telemetry also changed for empathy. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first. B) Tune the named component while holding	Correct answer: A; requires advanced judgment about alliance, stakeholder styles, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	probing advanced decision — P02	Use Listening drills and conflict role-play to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P02-007	P02	Objective Question	4	The steering committee asks whether alliance is ready to support 'Audience-appropriate, high-value questions and constructive conflict resolution.' Which proof carries the most weight? A) Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known	Correct answer: A; requires advanced judgment about alliance, stakeholder styles, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	alliance advanced decision — P02	Use Listening drills and conflict role-play to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P02-008	P02	Objective Question	5	Security prioritizes difficult conversations, engineering prioritizes confirmation, and operations raises concerns about listening. Which should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and preferred compromises in writing. B) Translate concerns into	Correct answer: B; requires advanced judgment about confirmation, difficult conversations, evidence and decision consequences.	Translate concerns into decision criteria, separate confirmation and confirmation, difficult conversations, evidence, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	confirmation advanced decision — P02	Use Listening drills and conflict role-play to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P02-009	P02	Objective Question	4	A new requirement invalidates an assumption behind empathy midway through delivery. Which action demonstrates senior judgment? A) Create a follow-on backlog item, but first confirm that current work remains valid and no critical dependency requires immediate redesign. B) Keep the original design for the current	Correct answer: C; requires advanced judgment about empathy, collaboration, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	empathy advanced decision — P02	Use Listening drills and conflict role-play to practice assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes

RSA-P02-010	P02	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on stakeholder styles? A) Which integration points carry the greatest uncertainty, and how have comparable teams reduced similar implementation and operating risks? B) Could the design meet current requirements with fewer	Correct answer: C; requires advanced judgment about stakeholder styles, influence without authority, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	stakeholder styles advanced decision — P02	Use Listening drills and conflict role-play to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P02-011	P02	Objective Question	5	After a successful pilot, the conflicted discovery workshop must operationalize difficult conversations. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assumes primary support responsibility. B) Assign accountable ownership.	Correct answer: B; requires advanced judgment about difficult conversations, Listening, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	difficult conversations advanced decision — P02	Use Listening drills and conflict role-play to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P02-012	P02	Objective Question	4	An assessor challenges your recommendation because a crucial fact about collaboration remains uncertain. Which answer is strongest? A) Pause the decision until the uncertainty is fully resolved, then return with one firm recommendation and no conditional alternatives. B) State the recommendation and its	Correct answer: D; requires advanced judgment about collaboration, paraphrasing, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible risk, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	collaboration advanced decision — P02	Use Listening drills and conflict role-play to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P03-001	P03	Communication	4	How would you explain a Dashboard architecture to a CIO differently from how you would explain it to a data engineer?	What would each audience care about? Which details would you include or omit? How would you keep both explanations consistent?	Tailors the CIO message to outcomes, risk, cost, governance and roadmap while giving the engineer concrete data flows, interfaces, security, compute and operational details; preserves the same core decisions and trade-offs.	Uses identified jargon-heavy explanations; oversimplifies for the CIO to the point of inaccuracy; gives the engineer only a product pitch.	Audience-adapted architecture communication	Present the same architecture to executive and engineering audiences	4	Active	1.2	Consulting & Client Skills	Intermediate	Live assessor	Yes
RSA-P03-002	P03	Objective Question	4	A time-limited whiteboard session must make a high-impact decision about Story flow while transitions creates a competing constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B)	Correct answer: C; requires advanced judgment about Story flow, transitions, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off. RSA-P03-009	P03	Objective Question	5	Which design-review question most effectively exposes a hidden weakness in an approach centered on diag amts? A) What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected? B) Which integration points carry the greatest uncertainty,	Correct answer: A; requires advanced judgment about diagrams, summaries, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	diagrams advanced decision — P03	Use Whiteboard architecture and present to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P03-010	P03	Objective Question	4	After a successful pilot, the time-limited whiteboard session must operationalize whiteboarding. Which operating model is strongest? A) Retain the pilot team through a defined transition period with service targets while operations gradually assumes primary support responsibility. B) Transfer ownership as go-live using acceptance	Correct answer: C; requires advanced judgment about whiteboarding, handling questions, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	whiteboarding advanced decision — P03	Use Whiteboard architecture and present to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P03-011	P03	Objective Question	4	An assessor challenges your recommendation because a crucial fact about transitions remains uncertain. Which answer is strongest? A) Pause the decision until the uncertainty is fully resolved, then return with one firm recommendation and no conditional alternatives. B) State the recommendation and its	Correct answer: C; require advanced judgment about transitions, Story flow, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible risk, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	transitions advanced decision — P03	Use Whiteboard architecture and present to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P04-001	P04	Communication	4	Explain a complex Spark performance issue to a project manager who does not know Spark, while still making the decision and risk clear.	What analogy or metric would you use? What action do you need from them?	Simplifies accurately, connects technical issue to S/A outcomes and next decision.	Uses unexplained jargon or oversimplifies inaccuracy.	Audience adaptation	Technical-to-business communication practice	4	Active	1.1	Customer Solutioning	Intermediate	Live assessor	Yes
RSA-P04-002	P04	Objective Question	5	A high-severity client update must make a high-impact decision about Email structure while stakeholder data creates a competing constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture after early adoption reveals which trade-offs matter most. B)	Correct answer: D; requires advanced judgment about Email structure, recommendations, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Email structure advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P04-003	P04	Objective Question	4	During Production incident or meeting follow-up, an early demonstration of executive summaries succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor production closely for limitations not	Correct answer: C; requires advanced judgment about executive summaries, action language, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	executive summaries advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P04-004	P04	Objective Question	4	Two technically credible designs use meeting notes differently. One optimizes short-term delivery, the other improves Email structure but adds complexity. How should the RSA decide? A) Choose the faster design if it is reversible, then schedule a formal checkpoint after early usage data becomes available. B) Choose the more	Correct answer: C; requires advanced judgment about meeting notes, Email structure, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reusability; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	meeting notes advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P04-005	P04	Objective Question	5	A production issue is attributed to recommendations, although telemetry also changed for executive summaries. Which investigation sequence is strongest? A) Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change	Correct answer: A; requires advanced judgment about recommendations, executive summaries, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	recommendations advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P04-006	P04	Objective Question	4	The steering committee asks whether action language is ready to support "Clear, concise written communication." Which proof carries the most weight? A) Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual	Correct answer: A; requires advanced judgment about action language, meeting notes, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	action language advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P04-007	P04	Objective Question	4	Security prioritizes recommendations, engineering prioritizes Email structures, and operations raises concerns about executive summaries. What should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and preferred compromises in writing. B) Translate	Correct answer: B; requires advanced judgment about Email structures, recommendations, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Email structure advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P04-008	P04	Objective Question	5	A new requirement invalidates an assumption behind executive summaries midway through delivery. Which action demonstrates senior judgment? A) Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path. B) Create	Correct answer: A; require advanced judgment about executive summaries, action language, evidence and decision consequences.	Quantify the impact on outcomes, dependencies, architecture, cost, and delivery; update the decision record and obtain explicit agreement on the revised path.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	executive summaries advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P04-009	P04	Objective Question	4	Which design-review question most effectively exposes a hidden weakness in an approach centered on meeting notes? A) Which integration points carry the greatest uncertainty, and how have comparable teams reduced similar implementation and operating risks? B) What credible condition could cause failure, how would it	Correct answer: B; requires advanced judgment about meeting notes, Email structure, evidence and decision consequences.	What credible condition could cause failure, how would it be detected and contained, who owns recovery, and which outcome would be affected?	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	meeting notes advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P04-010	P04	Objective Question	4	After a successful pilot, the high-severity client update must recommend recommendations. Which operating model is strongest? A) Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks. B) Retain	Correct answer: A; requires advanced judgment about recommendations, executive summaries, evidence and decision consequences.	Assign accountable ownership, service measures, monitoring, runbooks, escalation paths, controlled change, and periodic evidence-based review of performance and risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	recommendations advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Intermediate	Online assessment	Yes
RSA-P04-011	P04	Objective Question	5	An assessor challenges your recommendation because a crucial fact about action language remains uncertain. Which answer is strongest? A) Pause the decision until the uncertainty is fully resolved, then return with one firm recommendation and no conditional alternatives. B) State the recommendation and its	Correct answer: D; requires advanced judgment about action language, meeting notes, evidence and decision consequences.	Acknowledge the uncertainty, explain its decision impact, define the smallest credible risk, and describe the alternative if the assumption fails.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	action language advanced decision — P04	Use Rewrite a technical update for a client to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Communication Judgment	Advanced	Online assessment	Yes
RSA-P02-001	P02	Communication	4	Present a three-minute architecture recommendation, including one major trade-off and one assumption that must be validated before implementation.	How do you structure the message? What would change your recommendation?	Structured recommendation, explicit assumptions/ade-ptions and decision focus.	Presents only components, hides uncertainty.	Architecture communication	Architecture presentation practice	4	Active	1.1	Customer Solutioning	Intermediate	Live assessor	Yes

RSA-F02-002	F02	Objective Question	4	A independent readiness panel must make a high-impact decision about Discovery + architecture + recommendation + objection handling + next steps while client simulation creates a competing constraint. Which response is most defensible? A) Allow teams to choose within shared guardrails, then standardize the architecture	Correct answer: D; requires advanced judgment about Discovery + architecture + recommendation + objection handling + next steps, client simulation, evidence and decision consequences.	Define the outcome and non-negotiable constraints, compare viable options, make the trade-off explicit, and test the highest-risk assumption before commitment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	Discovery + architecture + recommendation + objection handling + next steps advanced decision — F02	Use Full simulated client engagement followed by an independent validator session to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F02-003	F02	Objective Question	4	During Unseen enterprise case with changing requirements and no prior coaching on the exact scenario, an early demonstration of unseen case succeeds, but only under ideal conditions. What evidence is required before scaling? A) Combine a proven reference architecture with stakeholder approval, then monitor production	Correct answer: C; requires advanced judgment about unseen case, final scorecard, evidence and decision consequences.	Run representative tests across scale, failure, recovery, and realistic usage, measuring agreed criteria and documenting limitations before approving broader deployment.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	unseen case advanced decision — F02	Use Full simulated client engagement followed by an independent validator session to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F02-004	F02	Objective Question	5	Two technically credible designs use technical probes differently. One optimizes short term delivery, the other improves Discovery + architecture + recommendation + objection handling + next steps but adds complexity. How should the RSA decide? A) Choose the faster design if it is reversible, then schedule a formal checkpoint	Correct answer: B; requires advanced judgment about technical probes, Discovery + architecture + recommendation + objection handling + next steps, evidence and decision consequences.	Score both designs against outcome, risk, cost, operability, and reversibility; document assumptions and identify evidence that would change the recommendation.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	technical probes advanced decision — F02	Use Full simulated client engagement followed by an independent validator session to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Advanced	Online assessment	Yes
RSA-F02-005	F02	Objective Question	4	A production issue is attributed to client simulation, although telemetry also changed for unseen case. Which investigation sequence is strongest? A) Tame the named component while holding other factors stable, then use incident telemetry to confirm whether the adjustment removed the cause. B) Roll back the most	Correct answer: D; requires advanced judgment about client simulation, unseen case, evidence and decision consequences.	Form competing hypotheses, identify distinguishing evidence, reproduce safely, isolate the causal condition, and test the smallest corrective change first.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	client simulation advanced decision — F02	Use Full simulated client engagement followed by an independent validator session to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F02-006	F02	Objective Question	4	The steering committee asks whether final scorecard is ready to support Panel score across Technical/Consulting/Communication; all pillar gates passed with no critical open gaps. Which proof carries the most weight? A) Demonstrate performance against agreed functional and non-functional criteria, including boundary	Correct answer: A; requires advanced judgment about final scorecard, technical probes, evidence and decision consequences.	Demonstrate performance against agreed functional and non-functional criteria, including boundary conditions, operational ownership, known limitations, and residual risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.	final scorecard advanced decision — F02	Use Full simulated client engagement followed by an independent validator session to practise assumptions, alternatives, failure conditions, validation evidence and stakeholder-facing recommendations.	2	Active	1.2	Advanced Integrated Judgment	Intermediate	Online assessment	Yes
RSA-F02-007	F02	Objective Question	5	Security prioritizes client simulation, engineering prioritizes Discovery + architecture + recommendation + objection handling + next steps, and operations raises concerns about unseen case. What should happen next? A) Ask the sponsor to decide after each team documents its mandatory requirements, expected impact, and	Correct answer: D; requires advanced judgment about Discovery + architecture + recommendation + objection handling + next steps, client simulation, evidence and decision consequences.	Translate concerns into decision criteria, separate mandatory constraints from preferences, compare compliant alternatives, and time-box evidence gathering for unresolved risks.	Premature commitment, weak causal evidence, missing operational ownership or failure to address the stated trade-off.
